38th week

District wise disease alerts-outbreaks reported in the 38th week 2026

38th Week Map

Unique ID.	Name of State-UT	Name of District	Disease-Illness	No. of Cases	No. of Deaths	Date of Start of Outbreak	Date of Reporting	Current Status	Comments- Action Taken
AS/BAJ/2026/38/1538	**Assam**	**Bajali**	**Acute Diarrhoeal Disease**	**56**	**0**	15-09-2026	17-09-2026	**Under Surveillance**	Cases of fever, abdominal pain and loose motion were reported from Village Pubhati and Nakuchi, Sub-District Sarupeta (Pt), District Bajali. District RRT investigated the outbreak. Both children and adults were affected. A religious ceremony was organized by a family at Pubhati Village where attendees consumed Prasad (made from milk, rice flour, sugar, banana and maida). Some people recovered after taking medicine from local shops, while 15 required hospitalization at Bhawanipur CHC. All have recovered. Community awareness and health education given by the peripheral team on safe drinking water and food habits, hygiene and sanitation.
AS/DIB/2026/38/1539	**Assam**	**Dibrugarh**	**Acute Diarrhoeal Disease**	**23**	**0**	16-09-2026	16-09-2026	**Under Surveillance**	Cases of fever, abdominal pain, loose stools and vomiting, were reported from Village Mohanbari Orr, Sub-District Dibrugarh East, District Dibrugarh. The District RRT investigated the outbreak. The affected individuals, aged 3-60 years, had consumed Prasad and Khisiri during a religious festival. All affected individuals were treated at Mohanbari Tea Estate Hospital and Lahoal BPHC. 1 water sample collected from the source used for soaking the Prasad ingredients was tested by the MPN method. The sample showed a presumptive coliform count of 161 bacilli/100 mL and was classified as Class IV (unsatisfactory for drinking purposes). 2 rectal swab samples were

									tested at the State Referral Laboratory, Department of Microbiology, Assam Medical College and Hospital (AMCH), Dibrugarh, and showed no significant growth of enteric bacterial pathogens. ORS and antidiarrhoeal medicines were distributed among the affected individuals. Community awareness and health education given by the peripheral team on safe drinking water and food habits, hygiene and sanitation.
AS/GOA/2026/38/1540	**Assam**	**Goalpara**	**Fever**	**13**	**0**	16-09-2026	17-09-2026	**Under Surveillance**	Cases of fever with body ache were reported from Villages Dari Duri and Bang Kanda, Sub-District Balijana, District Goalpara. District RRT investigated the outbreak. Both children and adults were affected. House to house visit was done. 11 serum samples collected and sent to DPHL Goalpara, tested negative for Dengue (NS1 Ag ELISA). Source reduction activities were conducted in the area. Community awareness and health education given by the peripheral team on vector control measures, hygiene and sanitation.
AS/KAM/2026/38/1541	**Assam**	**Kamrup**	**Suspected Food Poisoning**	**69**	**0**	17-09-2026	19-09-2026	**Under Surveillance**	Cases of loose watery stools and vomiting, with abdominal pain and fever were reported from Village Barheramdo, Sub-District Palasbari, District Kamrup. District RRT investigated the outbreak. The affected age group was 9-76 years. The cases had consumed soaked whole mung, desiccated coconut, and fruits as Prasad during a religious event. A medical camp was conducted. Cases were treated. Community awareness and health education given by the peripheral

									team on safe drinking water and food habits, hygiene and sanitation.
AS/KOK/2026/38/1542	**Assam**	**Kokrajhar**	**Human Rabies**	**1**	**1**	16-09-2026	18-09-2026	**Under Surveillance**	A 43-year-old male from Sonapuri Village sustained a non-bleeding dog scratch on his right foot in April 2026. The wound was of Category II. He did not seek medical attention or receive anti-rabies vaccination and instead consulted traditional healers, receiving locally prepared medicines over 2 consecutive months. On 16.09.2026, he developed tingling sensations in both lower limbs, abdominal cramps, and difficulty swallowing. He sought care at multiple healthcare facilities, where human rabies was clinically suspected, and was referred for further management. However, as reported by family members, he was not admitted at the referred facilities. He was subsequently taken home and died on 18.09.2026. District RRT investigated the outbreak. Sensitisation of traditional healers was done. Community awareness and health education given by the peripheral team on vaccination, hygiene and sanitation.
AS/LAK/2026/38/1543	**Assam**	**Lakhimpur**	**Suspected Food Poisoning**	**32**	**0**	18-09-2026	18-09-2026	**Under Surveillance**	Cases of abdominal pain and loose motion were reported from Villages Kachua, Bebejia and Rampur Simoluguri, Sub-District Dhakuakhana (Pt-I), District Lakhimpur. District RRT investigated the outbreak. Both children and adults were affected. Cases had consumed prashad and rice with fish during a religious occasion. The cases were treated at Dhakuakhana SDCH and LMCH. 10 rectal swab specimens were collected at Dhakuakhana SDCH

									and sent to DPHL, IDSP, Lakhimpur for culture and sensitivity testing. Results showed normal growth of E. Coli after 48 hours of aerobic incubation in all 10 samples. Poor hygiene and sanitation were observed in the locality. Community awareness and health education given by the peripheral team on safe drinking water and food habits, hygiene and sanitation.
AS/SON/2026/38/1544	**Assam**	**Sonitpur**	**Suspected Food Poisoning**	**56**	**0**	20-09-2026	20-09-2026	**Under Surveillance**	Cases of abdominal discomfort and loose stools were reported from Village Dhekiajuli Bagan, Sub-District Dhekiajuli (Pt), District Sonitpur. District RRT investigated the outbreak. Cases had consumed mah-prasad and khichdi at a religious occasion. A house-to-house visit was conducted. Both children and adults were affected. 3 water samples and 4 rectal swab samples were collected for laboratory investigation at DPHL and SRL, TMCH. The water samples were found to be unsatisfactory for drinking purposes based on the MPN test. All 4 rectal swab samples showed growth of normal gut flora. All cases recovered. Community awareness and health education given by the peripheral team on safe drinking water and food habits, hygiene and sanitation.
BR/MUN/2026/38/1545	**Bihar**	**Munger**	**Suspected Food Poisoning**	**19**	**0**	18-09-2026	19-09-2026	**Under Surveillance**	Cases of abdominal pain and loose stools were reported from Village Sirmatpur, Sub-District Munger, District Munger. District RRT investigated the outbreak. The affected age group was 18-21 years. Cases had consumed Prasad at a religious festival in Engineering College, Munger. All

									students were treated at Sadar Hospital, Munger. Community awareness and health education given by the peripheral team on safe drinking water and food habits, hygiene and sanitation.
BR/PAT/2026/38/1546	**Bihar**	**Patna**	**Acute Gastroenteritis**	**35**	**0**	16-09-2026	16-09-2026	**Under Surveillance**	Cases of high-grade fever, abdominal pain, vomiting and diarrhoea were reported from Village Kanchanpur Kharagpur, Sub-District Bihta, District Patna. District RRT investigated the outbreak. The affected age group was 13 to 18 years. Cases had consumed food at a shraddha feast. RRT conducted door-to-door visits and provided treatment and medicine in the affected area. 2 stool samples were collected and sent to PMCH, Patna, no pathogenic organism isolated. Community awareness and health education given by the peripheral team on hygiene and sanitation.
BR/PUR/2026/38/1547	**Bihar**	**Purnia**	**Measles**	**5**	**0**	14-09-2026	19-09-2026	**Under Surveillance**	Cases of fever with rash were reported from Village Mathia, Sub-District Purnia East, District Purnia. District and Block RRT investigated the outbreak. Active search for fever cases was done. Cases were treated symptomatically. 1 serum sample collected and sent to AIIMS, Patna tested positive for Measles (IgM ELISA). Community awareness and health education given by the peripheral team on isolation of cases and vaccination, hygiene and sanitation.
BR/VAI/2026/38/1548	**Bihar**	**Vaishali**	**Suspected Typhoid**	**36**	**0**	14-09-2026	14-09-2026	**Under Surveillance**	Cases of fever with abdominal discomfort were reported from Village Raja Pakar, Sub-District Raja Pakar, District Vaishali. District RRT investigated the outbreak. 11 blood

									samples were tested by Widal at DH Hajipur and were positive for Salmonella typhi. Symptomatic treatment was given to the suspected individuals. Community awareness and health education given by the peripheral team on safe drinking water and food habits, hygiene and sanitation.
GJ/PAT/2026/38/1549	**Gujarat**	**Patan**	**Acute Diarrhoeal Disease**	**16**	**0**	19-09-2026	19-09-2026	**Under Surveillance**	Cases of loose motion were reported from Village Sahesa, Sub-District Sidhpur, District Patan. District RRT investigated the outbreak. House to house survey was done. Medicine and ORS packets were given to cases. The affected age group was 2-68 years. 5 water samples were collected and sent to PHC Sahesa for H2S testing. All five samples were found to be unfit for consumption. Chlorination of water sources was done. Community awareness and health education were given by the peripheral team on safe drinking water and food habits, hygiene and sanitation.
GJ/VAL/2026/38/1550	**Gujarat**	**Valsad**	**Acute Diarrhoeal Disease**	**20**	**0**	18-09-2026	18-09-2026	**Under Surveillance**	Cases of diarrhoea and vomiting were reported from Village Pardi Parnera (CT), Sub-District Valsad, District Valsad. District RRT investigated the outbreak. Cases were girl students residing at the PTC College Hostel, Parnera-Pardi. The affected age group was 17-23 years. 1 water sample and 4 stool samples were collected and sent to the Microbiology Department, GMERS Valsad, for testing. The water sample was tested by the multiple-tube method and found to be unfit for drinking purposes. All 4 stool samples were tested by culture and were negative for

									cholera. All affected individuals were assessed and treated by the Aarogya Sanjeevani Van, and a medical team was deployed at the site for medical management and active surveillance. Chlorination of the drinking-water source was undertaken, and ORS packets were distributed to the affected hostel residents. Community awareness and health education were given by the peripheral team on safe drinking water and food habits, hygiene and sanitation.
JH/LOH/2026/38/1551	**Jharkhand**	**Lohardaga**	**Fever**	**16**	**0**	12-09-2026	16-09-2026	**Under Surveillance**	Cases of fever, cough and headache were reported from Village Kuru, Sub-District Kuru, District Lohardaga. District RRT investigated the outbreak. The affected age group was 10-18 years. 1 blood sample was collected and tested for malaria using an RDK at Kuru CHC, Lohardaga. The sample tested negative. Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
JH/SIM/2026/38/1552	**Jharkhand**	**Simdega**	**Chickenpox & Rubella**	**18**	**0**	12-09-2026	14-09-2026	**Under Surveillance**	Cases of fever with rash were reported from Village Kurpani, Sub-District Thethaitangar, District Simdega. District RRT investigated the outbreak. The affected age group was 3 to 45 years. 5 blood samples were collected and sent to RIMS, Ranchi, for laboratory confirmation. Of these, four tested positive for Chickenpox IgM, while one was equivocal. Additionally, one sample tested positive for Rubella IgM by ELISA. Community awareness and health education were given by the peripheral team on isolation, vaccination, hygiene and sanitation.

JH/WES/2026/38/1553	**Jharkhand**	**West Singhbhum**	**Fever with rash**	**9**	**0**	15-09-2026	15-09-2026	**Under Surveillance**	Cases of fever with rash were reported from Village Kheriatangar, Sub-District Tantnagar, District West Singhbhum. District RRT investigated the outbreak. The affected age group was 15 to 26 years. Cases were treated symptomatically. 3 blood samples collected tested negative for Chickenpox (IgM ELISA). Community awareness and health education were given by the peripheral team on isolation of cases, hygiene maintenance and proper nutrition.
KL/ALA/2026/38/1554	**Kerala**	**Alappuzha**	**Chickenpox**	**31**	**0**	16-09-2026	17-09-2026	**Under Surveillance**	Cases of fever with vesicular rash were reported from Village Pathiyoor (CT), Sub-District Karthikappally, District Alappuzha. District RRT investigated the outbreak. The majority of the cases were in the age group 16-17 years. A common tuition centre was identified as a possible shared exposure site. Active case search and daily surveillance were conducted in nearby schools and surrounding areas. Cases were clinically diagnosed as chickenpox and treated symptomatically. Community awareness and health education were given by the peripheral team on isolation of cases, hygiene maintenance and proper nutrition.
KL/ERN/2026/38/1555	**Kerala**	**Ernakulam**	**Dengue**	**14**	**0**	17-09-2026	17-09-2026	**Under Surveillance**	Cases of fever, body pain, headache and fatigue were reported from Village Kanayannur (CT), Sub-District Kanayannur, District Ernakulam. District RRT investigated the outbreak. A house-to-house fever survey was done. The affected age group was 3 to 80 years. 2 serum samples were collected and sent to RPH Lab,

									Ernakulam, for Dengue IgM ELISA. Both samples tested positive. Fogging was done in the affected area. Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
KL/ERN/2026/38/1556	**Kerala**	**Ernakulam**	**Dengue**	**13**	**0**	17-09-2026	17-09-2026	**Under Surveillance**	Cases of fever with body pain and myalgia were reported from Village Aluva East, Sub-District Aluva, District Ernakulam. District RRT investigated the outbreak. A house-to-house fever survey was done. The affected age group was 2 to 72 years. 3 blood samples were collected and sent to the RPH Lab for Dengue IgM ELISA. All samples tested positive. Anti-larval activities and fogging were done in the affected area. Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
KL/ERN/2026/38/1557	**Kerala**	**Ernakulam**	**Dengue**	**10**	**0**	15-09-2026	15-09-2026	**Under Surveillance**	Cases of fever with body pain were reported from Village Edappally South, Sub-District Kanayannur, District Ernakulam. District RRT investigated the outbreak. The affected age group was 7 to 54 years. 2 blood samples were collected and sent to the RPH Lab for Dengue IgM ELISA. Fogging was carried out in the affected area. Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
KL/KOT/2026/38/1558	**Kerala**	**Kottayam**	**Suspected Food Poisoning**	**17**	**0**	19-09-2026	19-09-2026	**Under Surveillance**	Cases of loose stools associated with abdominal discomfort were reported from Village Pampady, Sub-District Kottayam, District Kottayam. District

									RRT investigated the outbreak. The affected age group was 18 to 30 years. All the cases were staying in a hostel, and all had consumed chicken biryani. Cases were treated symptomatically. Community awareness and health education were given by the peripheral team on safe drinking water, food habits, hygiene and sanitation.
KL/PAL/2026/38/1559	**Kerala**	**Palakkad**	**Hepatitis A**	**19**	**0**	17-09-2026	17-09-2026	**Under Surveillance**	Cases of fever, headache, nausea and vomiting, diarrhoea, fatigue, generalised weakness, loss of appetite and jaundice were reported from Village Ongallur - II (CT), Sub-District Pattambi, District Palakkad. District RRT investigated the outbreak. The affected age group was 3 to 39. A total of six serum samples were tested for Hepatitis A virus (HAV) by ELISA, and all six tested positive. Of the confirmed cases, one was diagnosed at PK Das Institute of Medical Sciences, Hospital and Medical College, Palakkad; four at Moulana Hospital, Perinthalmanna; and one at the Integrated Public Health Laboratory, District Hospital, Palakkad. Community awareness and health education were given by the peripheral team on safe drinking water, food habits, hygiene and sanitation.
KL/THR/2026/38/1560	**Kerala**	**Thrissur**	**Suspected Food Poisoning**	**27**	**0**	17-09-2026	19-09-2026	**Under Surveillance**	Cases of loose stools and abdominal pain were reported from Sub-District Chalakkudy, District Thrissur. District RRT investigated the outbreak. The affected age group was 18 to 24 years. All the affected cases were hostel inmates, and all had consumed chicken curry. 1 stool sample was collected and sent to the AMR Lab, General Hospital

									Thrissur, for culture. The sample tested negative for Salmonella, Shigella, and Vibrio cholerae. Community awareness and health education were given by the peripheral team on safe drinking water, food habits, hygiene and sanitation.
KL/THR/2026/38/1561	**Kerala**	**Thrissur**	**Hepatitis A**	**12**	**0**	16-09-2026	16-09-2026	**Under Surveillance**	Cases of fever, malaise, abdominal pain, nausea and vomiting were reported from Village Kanjirakode, Sub-District Talappilly, District Thrissur. District RRT investigated the outbreak. The affected age group was 3 to 31 years. 1 blood sample was collected and sent to the GMC Thrissur lab, where it tested positive for anti-HAV IgM by ELISA. A water sample was collected from an open well and sent to Ubic Envirocare Lab, Thrissur, for testing. The sample showed the presence of coliforms (61 CFU/100 mL). Community awareness and health education were given by the peripheral team on safe drinking water, food habits, hygiene and sanitation.
MP/KHA/2026/38/1562	**Madhya Pradesh**	**Khandwa (East Nimar)**	**Dengue**	**53**	**0**	17-09-2026	17-09-2026	**Under Surveillance**	Cases of Fever with Headache, joint pain and weakness were reported from Village Moujwadi Ryt, Sub-District Harsud, District Khargone (East Nimar). District RRT investigated the outbreak. The affected age group was 2 to 65 years. 7 Blood Samples were collected and sent to the District Hospital Khandwa lab for Dengue Rapid NS1 test. Out of 7 samples, 5 samples tested positive for Dengue. District RRT investigated the outbreak. Community awareness and health education were given by the peripheral team on vector control measures,

									hygiene and sanitation.
MP/KHA/2026/38/1563	**Madhya Pradesh**	**Khargone (West Nimar)**	**Cholera**	**31**	**0**	15-09-2026	15-09-2026	**Under Surveillance**	Cases of loose stools and vomiting were reported from Village Barud, Sub-District Khargone, District Khargone (West Nimar). District RRT investigated the outbreak. The affected age group was 5 to 67 years. All cases were linked to the consumption of rabri purchased from a hotel in Barud village. Four stool samples were collected and sent to DPHL, Indore, for culture, of which three tested positive for Vibrio cholerae. Additionally, two water samples were collected and sent to DPHL, Indore, for testing. Both samples were found unfit for consumption. Chlorination of water sources was done. Community awareness and health education was given by the peripheral team on safe food habits and drinking water, hygiene and sanitation.
MP/REW/2026/38/1564	**Madhya Pradesh**	**Rewa**	**Scrub Typhus**	**18**	**0**	19-09-2026	20-09-2026	**Under Surveillance**	Cases of fever with body pain were reported from Village Baikunthpur, Sub-District Sirmour, District Rewa. District RRT investigated the outbreak. A house-to-house survey was done. The affected age group was 6 to 87 years. Cases were treated at the health facility. 18 blood samples were collected and sent to VRDL, S.S Medical College, Rewa, for Scrub Typhus IgM ELISA, and all samples tested positive for Scrub Typhus. Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
MP/REW/2026/38/1565	**Madhya**	**Rewa**	**Scrub**	**12**	**0**	20-09-2026	20-09-2026	**Under**	Cases of fever with body pain were reported from Village Shahapur, Sub-

	Pradesh		**Typhus**					**Surveillance**	District Semaria, District Rewa. District RRT investigated the outbreak. The affected age group was 10 to 72 years. 12 blood samples were collected and sent to VRDL, S.S. Medical College, Rewa, for Scrub Typhus IgM ELISA, and all samples tested positive for Scrub Typhus. Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
MH/AHI/2026/38/1566	**Maharashtra**	**Ahilyanagar**	**Hepatitis A**	**11**	**0**	19-09-2026	18-09-2026	**Under Surveillance**	Cases of nausea, loss of appetite, vomiting and yellow discolouration of eyes were reported from Village Jamb, Sub-District Nagar, District Ahilyanagar. District RRT investigated the outbreak. A house-to-house survey was done. The affected age group was 4 to 16 years. Cases were treated at CHC Devgaon. Out of 11 Blood samples collected and tested at NIV Pune, 7 samples tested positive for Hepatitis A (Anti-HAV IgM ELISA). Community awareness and health education were given by the peripheral team on safe drinking water, food habits, hygiene and sanitation.
MH/AHI/2026/38/1567	**Maharashtra**	**Ahilyanagar**	**Fever**	**54**	**0**	13-09-2026	18-09-2026	**Under Surveillance**	Cases of fever were reported from Village Bhokardara, Sub-District Parner, District Ahilyanagar. District RRT investigated the outbreak. House-to-house fever survey was done. The affected age group was 5 to 72 years. Cases were treated at PHC Bhalawani. A total of 54 blood samples were collected and sent to District Hospital Ahilyanagar Lab. All 54 samples tested negative for Malaria (Microscopy Peripheral Blood Smear) Community

									awareness and health education given by the peripheral team on vector control measures, hygiene and sanitation.
MH/AHI/2026/38/1568	**Maharashtra**	**Ahilyanagar**	**Fever**	**28**	**0**	25-09-2026	18-09-2026	**Under Surveillance**	Cases of fever were reported from Village Jambulban, Sub-District Rahuri, District Ahilyanagar. District RRT investigated the outbreak. A house-to-house fever survey was done. The affected age group was 2 to 51 years. Cases were treated at PHC Baragaon Nandur. A total of 26 blood samples were collected and sent to District Hospital Ahilyanagar Lab. All 26 samples tested negative for Malaria (Microscopy Peripheral Blood Smear (MP)). Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
MH/AHI/2026/38/1569	**Maharashtra**	**Ahilyanagar**	**Malaria**	**20**	**0**	25-09-2026	18-09-2026	**Under Surveillance**	Cases of fever with chills were reported from Village Palshi, Sub-District Parner, District Ahilyanagar. District RRT investigated the outbreak. House-to-house fever survey was done. The affected age group was 9 to 67 years. Cases were treated at PHC Khadakwadi. Out of 20 blood samples collected and sent to District Hospital Ahilyanagar Lab, 3 samples tested positive for P. vivax (Microscopy peripheral blood smear). Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
MN/THO/2026/38/1570	**Manipur**	**Thoubal**	**Suspected Food Poisoning**	**7**	**1**	15-09-2026	18-09-2026	**Under Surveillance**	Cases of vomiting, abdominal pain, and loose motion were reported from Village Leirongthel Malom, Sub-District Thoubal, District Thoubal.

									District RRT investigated the outbreak. The affected age group from 3 to 52 years. Cases had consumed locally prepared homemade curry, usoi mangal utti from Leirongthel Malom sharangthem leikai. A 52 years old male died at District hospital, thoubal on 14.09.2026 around 08:00 a.m. Cases were treated at PHC Khoirom. 6 cases were treated at RIMS Imphal. Community awareness and health education given by the peripheral team on hygiene and sanitation.
ML/SOU/2026/38/1571	**Meghalaya**	**South Garo Hills**	**Dengue**	**30**	**0**	16-09-2026	16-09-2026	**Under Surveillance**	Cases of fever with body pain were reported from Village New Rongara, Sub-District Rongara, District South Garo Hills. District RRT investigated the outbreak. House to house fever survey was done. Both children and adults were affected. Cases were treated at PHC Rongara. 30 Serum samples were collected and tested at National Rongara PHC. 13 samples tested positive for Dengue (NS1 Ag ELISA), 8 were positive from Rapid NS1 and 7 were positive from IgM ELISA. Source reduction and fogging were carried out. Community awareness and health education given by the peripheral team on vector control measures, hygiene and sanitation.
NL/NOK/2026/38/1572	**Nagaland**	**Noklak**	**Fever**	**85**	**0**	14-09-2026	14-09-2026	**Under Surveillance**	Cases of fever with body pain were reported from Village Chipur, Sub-District Thonoknyu, District Noklak. District and block RRT investigated the outbreak. House to house survey was done. Both children and adults were affected. Rapid diagnostic tests were done for malaria, typhoid and scrub

									typhus. Out of 80 serum samples collected, 5 samples were positive for scrub typhus. Community awareness and health education given by the peripheral team on vector control measures, hygiene and sanitation.
TN/DIN/2026/38/1573	**Tamil Nadu**	**Dindigul**	**Measles**	**8**	**0**	16-09-2026	18-09-2026	**Under Surveillance**	Cases of fever with rash were reported from Village Chinnaiahpuram, Sub-District Dindigul West, District Dindigul. District RRT investigated the outbreak. Active surveillance was conducted. The affected age group was 3-14 years. Cases were treated at PHC Seelapad. 8 Blood samples were collected and tested at MKMC, Salem. 2 samples were positive for Measles virus (Anti- Measles IgM ELISA). Community awareness and health education given by the peripheral team on isolation of cases and vaccination, hygiene and sanitation.
TN/THO/2026/38/1574	**Tamil Nadu**	**Thoothukkudi**	**Chickenpox**	**10**	**0**	18-09-2026	20-09-2026	**Under Surveillance**	Cases of fever with vesicular rash were reported from Village Arumuganeri, Sub-District Tiruchendur, District Thoothukkudi. District RRT investigated the outbreak. Active search for fever cases was done. Cases were given symptomatic treatment at PHC Sonaganvilai. The affected age group was 7-15 years. No sample was collected for testing. Community awareness and health education given by the peripheral team on isolation of cases, hygiene and sanitation.
WB/BIR/2026/38/1575	**West Bengal**	**Birbhum**	**Dengue**	**7**	**0**	17-09-2026	19-09-2026	**Under Surveillance**	Cases of fever with body pain were reported from Village Raihat, Sub-District Sainthia, District Birbhum. District RRT investigated the outbreak. House-to-house fever survey was done.

									Both children and adults were affected. Cases were treated at State General Hospital (SGH). 07 serum samples were collected and tested at Raihat HWC. All samples tested positive for Dengue (NS1 Ag ELISA). Community awareness and health education were given by the peripheral team on vector control measures, hygiene and sanitation.
WB/COO/2026/38/1576	**West Bengal**	**Cooch Behar**	**Malaria**	**9**	**0**	16-09-2026	17-09-2026	**Under Surveillance**	Cases of fever were reported from Village Balarampur, Sub-District Tufanganj - I, District Cooch Behar.
