## State Action Plan for Climate Change and Human Health 2022-2027

---

National Centre for  
Disease Control  
Government of India

National Programme  
on Climate Change  
and Human Health

## CONTENT

### PART I

1. Introduction

2. Climate Vulnerability

3. Climate Sensitive Issues/Disease prevalent in Maharashtra

4. NPCCHH Programme and its goals and objectives

5. Organizational Structure

### PART II

6. Health Adaptation Plan for Acute Respiratory Illnesses attributed to Air Pollution

7. Health Adaptation Plan for Heat related Illness

8. Health Adaptation Plan for Vector Borne Disease

9. Health Adaptation Plan for disaster management

10. Health Adaptation Plan for Climate Resilient Healthcare facilities

11. Budget

12. Annexure

Annexure 1: City wise List of Sentinel hospitals selected for ARI surveillance activity

Annexure 2: Role of different Ministries in control of Air Pollution

Annexure 3: Area wise distribution of Heat related illnesses data 2022

Annexure 4: Role of various departments in HRI

Annexure 5: District wise information of Malaria, Dengue, Chikungunya

13. References

## Part I- Introduction and Climate Sensitive Diseases

### Chapter 1

#### Introduction

Climate change is defined as: *“a change of climate which is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and which is in addition to natural climate variability observed over comparable time periods.”* It affects social and environmental determinants of health like –clean air, safe drinking water, sufficient food and secure shelter.

Climate change may negatively affect human health through a number of ways, but the commonly experienced are increased frequency and intensity of heat waves leading to rise in heat related illnesses and deaths, increased precipitation, floods, droughts and desertification costing lives directly. High temperature is known to increase the level of ‘ground level ozone’ and other ‘climate altering pollutants’ other than carbon dioxide, which further exacerbate cardio-respiratory and allergic diseases and certain cancers. Beside these, there is increase in transmission and spread of infectious diseases, changes in the distribution of water-borne, food borne and vector-borne diseases and effects on the risk of disasters and malnutrition.

The *United Nations Framework Convention on Climate Change (UNFCCC)* came into force on 21<sup>st</sup> March 1994. Since then many steps were initiated to reduce the effect of climate change at meetings like “Rio Convention 1992”, *Kyoto protocol 1997*”, “*Male’ Declaration 1998*”, “Convention of Parties”, “*Cancun Agreement 2010*”, “*Durban Platform 2011*”, “Nationally Determined Contributions” (NDCs) at Conference of Parties 21”.

India is signatory to “*Male’ Declaration*” wherein health sector has to be strengthened so as to make it climate resilient. According to Male’ Declaration, it is desired that health-care facilities should be prepared & climate-resilient, particularly in promoting to encourage that these are able to withstand any climatic event, and that essential services such as water, sanitation, waste management and electricity are functional during such events. Further, for climate resilient, the health department has to undertake measures to initiate the greening

of the health sector by adopting environment-friendly technologies, and using energy-efficient services.

Initiatives undertaken by Government of India are: a) Identification of Ministry of Environment, Forest & Climate Change (MOEF&CC) as nodal ministry; b) Formulation of National Environmental Policy 2006; c) Formulation of Prime Minister's Council on Climate Change for matters related to Climate Change.

MoEFCC has developed National Action Plan on Climate Change with eight missions. Later on four new missions (including Health Mission) were identified. The *Health Mission* aims to reduce climate sensitive illnesses through integration with other missions under National Action Plan for Climate Change (NAPCC) as well as through programmes run by various ministries. As a follow-up action, Ministry of Health and Family Welfare (MoHFW) constituted a National Expert Group on Climate Change & Health (NEGCH) to prepare National Action Plan on Climate Change and Human Health (NAPCCHH) and recommend strategies for indicators, mitigation, capacity building etc.

National Centre for Diseases Control (NCDC) is identified as the 'technical nodal agency' by MoHFW for the proposed National Mission on Health. The Centre for Environmental and Occupational Health Climate Change & Health (CEOH&CCH), NCDC, is implementing the National Programme of Climate Change and Human Health (NPCCHH), under which the Maharashtra has prepared its State Action Plan on Climate Change and Human Health (SAPCCHH). Since the inception of the programme i.e. 2019, the SAPCCHH is a long-term vision and planning document prepared by the Department of Health & Family Welfare, Maharashtra, applicable for up till year 2027. Based on this document, district specific action plans will also be prepared. The Maharashtra SAPCCHH highlights the current and future vulnerabilities to climate change in the state, the disease burden and the initiatives to be undertaken by the state to reduce the disease burden and develop a climate responsive and sustainable healthcare ecosystem in the state.

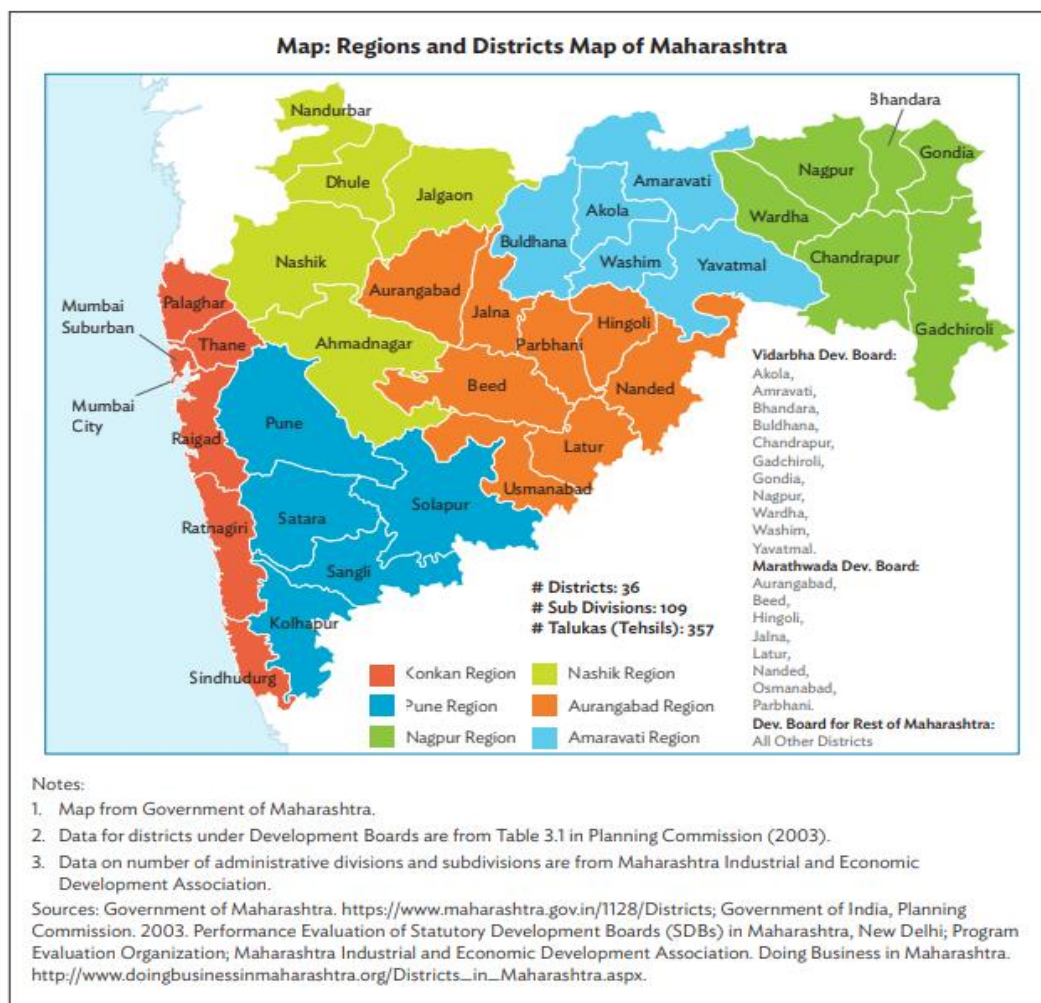

## Chapter-2

### Climate vulnerability in state

#### Geographical Area, Population, and Income

Maharashtra is the third largest state in India with an area of 308,000 square kilometres. This is the second most populous state in India. As of the 2011 census, Maharashtra's population was at 112.3 million, and is projected to have increased to 123 million by 2020. Maharashtra is among the high-income states of India with an estimated per capita income of \$2,732 per year.

Maharashtra consists of three distinct geopolitical entities; (i) West Maharashtra and Konkan, officially identified as “Rest of Maharashtra” (ROM), (ii) Marathwada, and (iii) Vidarbha regions.

## Maharashtra Statistics

Particulars	Details
Capital City	Mumbai
Area	307,713 Sq. Km.
Districts	36
Density	365
Revenue Divisions	6
Municipal Corporations	27
ZillaPrajaParishads	34
Gram Panchayats	28813
Households	24.4 million
Household size	6.12
Population	11.24 crores
Male	58,243,056
Female	54,131,277
Sex Ratio (Female per 1000 Males)	929
Decadal Growth Rate (2001-2011)	15.99
Rural Population	61,556,074
Rural Population Male	31,539,034
Rural Population Female	30,017,040
Rural to Total Population	54.78 %
Urban Population	50,818,259
Urban Population Male	26,704,022
Urban Population Female	24,114,237

<b>Urban to Total Population</b>	45.22%
<b>Child Population (0-6 years)</b>	13,326,517
<b>Child Population (0-6 years) Male</b>	7,035,391
<b>Child Population (0-6 years) Female</b>	6,291,126
<b>Child Sex Ratio (Female per 1000 Males)</b>	929
<b>Literates</b>	81,554,290
<b>Literates Male</b>	45,257,584
<b>Literates Female</b>	36,296,706
<b>Literacy Rate</b>	82.34 %
<b>Literacy Rate Male</b>	88.38 %
<b>Literacy Rate Female</b>	75.87 %
<b>Main Workers</b>	43,762,890

### Geography and Climate

Maharashtra state is vulnerable to extreme weather events like floods, droughts, and cyclone. Twelve per cent of land is prone to floods and river erosion; Maharashtra state has about **720 km** long indented coastline, is prone to cyclones and tsunamis; 68 per cent of the cultivable area is vulnerable to drought and hilly areas are at risk from landslides and avalanches. Heightened vulnerabilities to disaster risks can be related to expanding population, urbanization and industrialization, development within high-risk zones, environmental degradation and climate change

### Following hotspot districts are identified each event:

- Drought: Sangli, Ahmadnagar, Solapur, Dhule, Buldhana, Hingoli, Jalgaon, Osmanabad, Nandurbar, Nagpur, Satara, Akola, Nanded, Aurangabad, Pune, Amravati, Nashik, Jalna, Garchiroli, Raigad, Chandrapur, Gondia, Wardha, Yavatmal.
- Flood: Mumbai, Jalgaon, Aurangabad, Pune, Nagpur, Amravati, Nashik, Ratnagiri, Wardha, Thane.
- Cyclone: Mumbai, Ratnagiri, Thane.

SR. No	Rank	District	Event	Exposure	Sensitivity	Adaptive Capacity	Vulnerability Index	Vulnerability
1	1	Sangli	Drought	0.82	1	0.47	1	Very High
2	15	Ahmednagar	Drought	0.96	0.65	0.44	0.813	Very High
3	22	Solapur	Drought	0.82	0.75	0.47	0.75	Very High
4	27	Dhule	Drought	0.82	0.75	0.48	0.734	Very High
5	28	Mumbai	Flood & Cyclone	0.94	0.76	0.62	0.733	Very High
6	37	Buldana	Drought	0.82	0.65	0.44	0.694	Very High
7	49	Hingoli	Drought	0.76	0.52	0.37	0.612	Very High
8	49	Jalgaon	Flood & Drought	0.63	0.97	0.42	0.612	Very High
9	52	Osmanabad	Drought	0.96	0.55	0.51	0.593	High
10	61	Nandurbar	Drought	0.76	0.55	0.43	0.557	High
11	61	Nagpur	Drought	0.68	0.8	0.56	0.557	High
12	68	Satara	Drought	0.82	0.65	0.57	0.536	High
13	74	Akola	Drought	0.68	0.7	0.52	0.525	High
14	79	Nanded	Drought	0.76	0.46	0.4	0.501	High
15	87	Aurangabad	Flood & Drought	0.74	0.81	0.52	0.485	High
16	92	Nagaur	Flood & Drought	0.86	0.62	0.47	0.477	High
17	117	Pune	Flood & Drought	0.74	0.79	0.63	0.39	Moderate
18	135	Amravati	Flood & Drought	0.45	0.78	0.42	0.351	Moderate
19	148	Nashik	Flood & Drought	0.72	0.61	0.57	0.324	Moderate
20	150	Jalna	Drought	0.41	0.65	0.48	0.318	Moderate
21	151	Garhchiroli	Drought	0.68	0.39	0.48	0.317	Moderate
22	171	Ratnagiri	Flood & Cyclone	0.17	0.89	0.37	0.26	Moderate
23	187	Raigad	Drought	0.41	0.49	0.49	0.235	Moderate
24	191	Chandrapur	Drought	0.41	0.5	0.52	0.226	Moderate
25	196	Gondiya	Drought	0.41	0.42	0.46	0.215	Moderate
26	213	Wardha	Flood & Drought	0.28	0.72	0.51	0.166	Low
27	231	Yavatmal	Drought	0.41	0.27	0.51	0.124	Low
28	253	Thane	Flood & Cyclone	0.17	0.38	0.62	0.066	Low

## Chapter 3

### Climate Sensitive issue/Diseases prevalent in the State

Human health has always been influenced by weather and climate. Changes in climate and climate variability, particularly changes in weather extremes, affect the environment that provides us with clean air, food, water, shelter, and security. Climate Change (CC), together with other natural and human-made health stressors, threaten human health and well-being in numerous ways.

Following are the major Climate Sensitive Diseases prevalent in Maharashtra:

- Acute Respiratory Illnesses attributed to Air Pollution
- Heat-related illnesses
- Vector-Borne Diseases ( Dengue, Malaria, Chikungunya)
- Water-Borne Diseases (ADD, Cholera and AGE)
- Emerging and reemerging diseases (H1N1 influenza, Covid 19, Scrub typhus)
- Disaster management - Extreme weather events (floods, cyclones, drought, etc.) affecting health

#### Vector Borne Diseases

The major vector borne diseases prevalent in Maharashtra are Dengue, Malaria and Chikungunya. The Dengue is more prevalent in urban and periurban areas especially Pune, Kolhapur, Nagpur, Nashik Mumbai, Thane cities and few rural areas. Also, Chikungunya is prevalent in Pune, Satara and rural areas of Kolhapur and Sangli. The Malaria is prevalent in Gadchiroli, Gondia, Amravati, Chandrapur, Mumbai, Thane and Raigad districts. The Gadchiroli is tribal district and more than 50 percent malaria cases of state are reported in Gadchiroli district.

Year	Dengue		Malaria		Chikungunya	
	Cases	Deaths	Cases	Deaths	Cases	Deaths
2019	14888	29	11433	7	1646	0
2020	3356	10	19484	12	782	0
2021	12720	42	31160	14	2526	0
2022	5268	1	20579	16	787	0

#### Dengue

Maharashtra reported 14888 cases and 29 deaths in 2019. All these cases are IgM ELISA positive. The actual undiagnosed or rapid test positive cases are much more than the actual numbers. The diurnal temperature and humidity are more favourable for the mosquito survival and its density. Maharashtra is experiencing the extended monsoon till November which also results in the high

density of mosquito in urban areas. The District and corporation wise dengue cases reported in 2022 is as follows-

## Malaria

The Gadchiroli and Mumbai has maximum malaria cases out of state has reported in 2022. More than seventy percent cases are from both the district. The Maximum falciparum malaria cases are reported from Gadchiroli district followed by Mumbai.

### Water Borne Diseases

Maharashtra has reported many outbreaks of waterborne diseases especially Cholera, ADD etc. In 2022 almost 20 outbreaks of cholera reported in the state. Maximum outbreaks are reported from vidharbha region. During these outbreaks 18 deaths have been occurred.

Name of Disease	2020			2021			2022		
	Outbreak	Cases	Deaths	Outbreak	Cases	Deaths	Outbreak	Cases	Deaths
Cholera	0	0	0	2	176	0	24	921	18
Gastro	2	104	0	3	444	0	1	19	0
ADD	9	1063	0	13	992	0	12	1654	1
Hepatitis	1	7	0	1	10	0	1	34	0
Typhoid	0	0	0	0	0	0	0	0	0
<b>Total</b>	<b>12</b>	<b>1174</b>	<b>0</b>	<b>19</b>	<b>1622</b>	<b>0</b>	<b>38</b>	<b>2628</b>	<b>19</b>

### Leptospirosis

Leptospirosis is major concern in the Kokan belt of Maharashtra. Maximum Cases are reported from the Miumbai, Sindhudurg, Thane and Raigad. The main reason from the leptospirosis is water logging in Mumbai, Thane cities and paddy crops in Raigad and Sindhudurg districts.

Years	Cases	Deaths
2018	309	13
2019	684	15
2020	502	16
2021	347	10
2022	319	7

## Acute Respiratory Infection/ Influenza like illness and Influenza

Maharashtra state has reported maximum acute respiratory infection cases. Maximum ARI/ILI cases are reported from Pune, Nashik, Nagpur Satara, Kolhapur and Mumbai. The peak of ARI are July to October and December to April due to clod monsoon and and winter season in the state.

Details	2016	2017	2018	2019	2020	2021	2022
<b>ARI/ILI</b>	1823324	2202788	2496141	3269158	1620250	1106268	1020832
<b>Suspected influenza Cases</b>	18998	61206	50897	48618	20650	11888	18495
<b>Influenza A</b>	82	6144	2594	2287	121	387	3620
<b>Total Deaths</b>	26	778	462	246	3	2	204

## Other Diseases

Scrub typhus is also reported from various districts especially from Vidharbha districts.

Year	2019	2020	2021	2022
Cases	216	7	5	75
Deaths	3	1	1	0

Kyasanur forest Disease also reported from Sindhudurg district which is more densely with forest which result in high burden of KFD cases in particular block

Details	2017	2018	2019	2020	2021	2022
<b>Cases</b>	202	109	82	16	7	9
<b>Deaths</b>	12	3	4	4	1	0

## Other vulnerability factors

### Socioeconomic status of Maharashtra

Per Capita income of Maharashtra		
Year	Per Capita income at current prices (\$)	Growth Rate at 2011/ 12 prices (%)
FY 2016	2234	7.2
FY 2017	2415	9.21
FY 2018	2732	7.54

Per capita income of Maharashtra state is 2732 in 2018 but growth rate is not as expected which leads to increases below poverty population and affecting the standard of living and health seeking behaviours.

#### Urban and Rural Population

Maharashtra is the third most urbanized state in India, next to Tamil Nadu and Kerala. About 45% of the state's population live in urban areas. Almost half of Maharashtra's urban population reside in slums. Maharashtra has the largest urban population share (13.5%) in the country, followed by Uttar Pradesh (11.8%) and Tamil Nadu (9.2%). However, significant regional disparities in urbanization exist. There are five districts where the percentage of urban population is more than the state average of 45.2%. These are Mumbai (100%), Mumbai Suburban (100%), Thane (77%), Nagpur (68%), and Pune (61%). Four of these highly urbanized districts are in the rest of Maharashtra region. Nagpur is in Vidarbha. In Marathwada region, Aurangabad district has the highest level of urbanization at 43.8%, which is slightly below the state average of 45%. Some of the least urbanized districts are Gadchiroli (11%) in Vidarbha, Sindhudurg (12.6%) in Konkan, and Hingoli (15%) in Marathwada. Unplanned housing are exist, where more population lives in slums of urban areas eg Mumbai, Pune, Nagpur and Aurangabad.

#### Health Status of Maharashtra

Almost all measures of mortality, life expectancy, and population health status have indicated

gradual and steady improvement in Maharashtra over the last 50 years. On average, the health status in Maharashtra has been better than the all-India average. According to latest available estimates, average life expectancy at birth in Maharashtra is about 72.5 years. Following are the top causes of years of life lost in Maharashtra -

Over the decade, population health status in Maharashtra has been better than the all-India average. However, improvement in Maharashtra's population health status has failed to keep pace with faster rise of population health status all over the country. Epidemiological transition in Maharashtra has resulted in a higher burden of Non-communicable diseases. Dynamic interaction of emergent infectious diseases such as COVID-19 with NCD comorbidities calls for strengthening of health systems to deal with communicable and nutritional diseases as well as NCDs. Prevalent disease burden and emergent public health challenges call for strengthening of specialist services, hospital infrastructure and epidemiological surveillance. Maharashtra is vulnerable to emerging infectious diseases, despite improvements in conventional and summary measures of population health.

Targeted health systems strengthening is needed to improve access for the poor and build the state's resilience to deal with emerging public health challenges.

### **Public Health Infrastructure of Maharashtra**

The Public Health Department (PHD) in Maharashtra manages mostly the primary and secondary level health care facilities consisting of the primary health centers (PHCs), subcenters, first referral units (FRUs) or secondary level hospitals, and a few specialty hospitals for disease control programs. Most of the tertiary care facilities in the public sector are managed by the Directorate of Medical Education and Research (DMER), as they are affiliated with medical colleges. Most of the public sector health care facilities in metropolitan cities like Mumbai are managed by their respective urban local bodies.

The district and general hospitals provide broad specialty services. The district hospitals are located in revenue district headquarters. Out of 36 revenue districts, 23 district hospitals are running as such and the remaining district hospitals are attached to medical colleges. There are eight general hospitals with similar broad specialty services located in urban areas other than the town district headquarters, or in addition to the district hospital in the same place. Each district or general hospital has about 200 or more beds. About 25 of these hospitals have additional 25 beds in trauma units. Total bed capacity in 23 district and 8 general hospitals, including the trauma units, is 9,593. There are 13 women (maternal and child health) hospitals with a total bed capacity of 1,584. Super specialty medical care is usually available in attached hospitals of medical colleges. However, in 2008, two free standing regional referral super specialty hospitals were established at Nashik and Amravati. There are four mental health institutions, one each at Nagpur, Pune, Ratnagiri, and Thane, with a total of 5,555 beds. The four tuberculosis hospitals at Pune (120 beds), Buldhana (100 beds), Amravati (50 beds), and

Kolhapur (20 beds) have a total of 290 beds. Only one out of the four leprosy hospitals is functional, at Pune, with 350 beds. The remaining three leprosy hospitals, at Kolhapur, Osmanabad, and Ratnagiri have closed. A 50-bed orthopedic hospital is functioning at Parbhani.

As the 100- and 50-bedded sub-district hospitals are invariably located in sub-divisional headquarters, they are sometimes referred to as sub-divisional hospitals. Some of the 30 bedded rural hospitals are also located in sub-divisional headquarters and the remaining in Taluk or Block headquarters. In Maharashtra, the sub-district hospitals function as

community health centers (CHCs), an upgraded primary health center with 30 beds and equipped to provide comprehensive emergency obstetric care and as first referral units. As of May 2020, there are 456 sub-district hospitals (100 beds = 31, 50 beds = 61, 30 beds = 364) with a total of 17,070 beds.

### Short fall of health infrastructure in Maharashtra

The public health system in Maharashtra is characterized by deficiencies as well as inadequacy of optimal size health care facilities closer to the communities. Economy of scale with broader scope of services and appropriate case mix are critical to strengthen the trust of common man in public health care system.

Urban local bodies contribute in major ways in Maharashtra, spending 7.8% of total expenditure on health, the main part of which are funded from their own resources (5.5% of total).

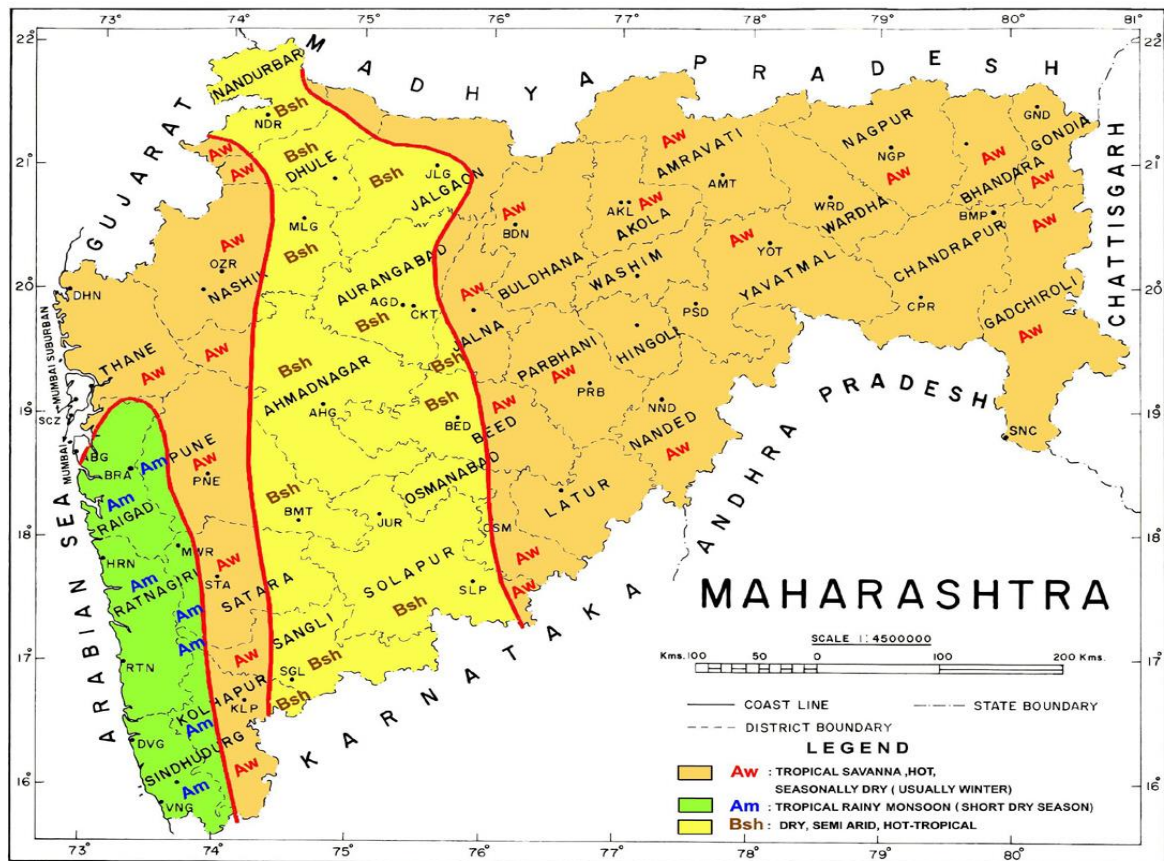

### Draught Prone areas in Maharashtra

Maharashtra state has divided in three regions namely Vidharbha region, Marathwada region and rest of Maharashtra. Few districts from Vidharnha region like Akola, Washim and Yavatmal. The whole marathwada region comes under drought prone areas.

### Flood prone areas in Maharashtra

District from rest of Maharashtra like districts from Kokan region, Kolhapur and Sangli are flood prone area.

Geo-physical & Climate variables i.e., Area with highest maximum temperature (Tmax), as per IMD in previous 5 years.

## CHAPTER 4

### SAPCCHH: Vision, Goal & Objectives

**Vision:** Strengthening of healthcare services for all the citizens of the state especially vulnerable like children, women, elderly, tribal and marginalized population against climate sensitive illnesses.

**Goal:** To reduce morbidity, mortality, injuries and health vulnerability due to climate variability and extreme weathers

**Objective:** To strengthen health care services against adverse impact of climate change on health.

#### Specific Objectives

##### Objective 1:

To create awareness among general population (vulnerable community), health-care providers and Policy makers regarding impacts of climate change on human health.

##### Objective 2:

To strengthen capacity of healthcare system to reduce illnesses/ diseases due to variability in climate.

##### Objective 3:

To strengthen health preparedness and response by performing situational analysis at state/ district/ below district levels.

##### Objective 4:

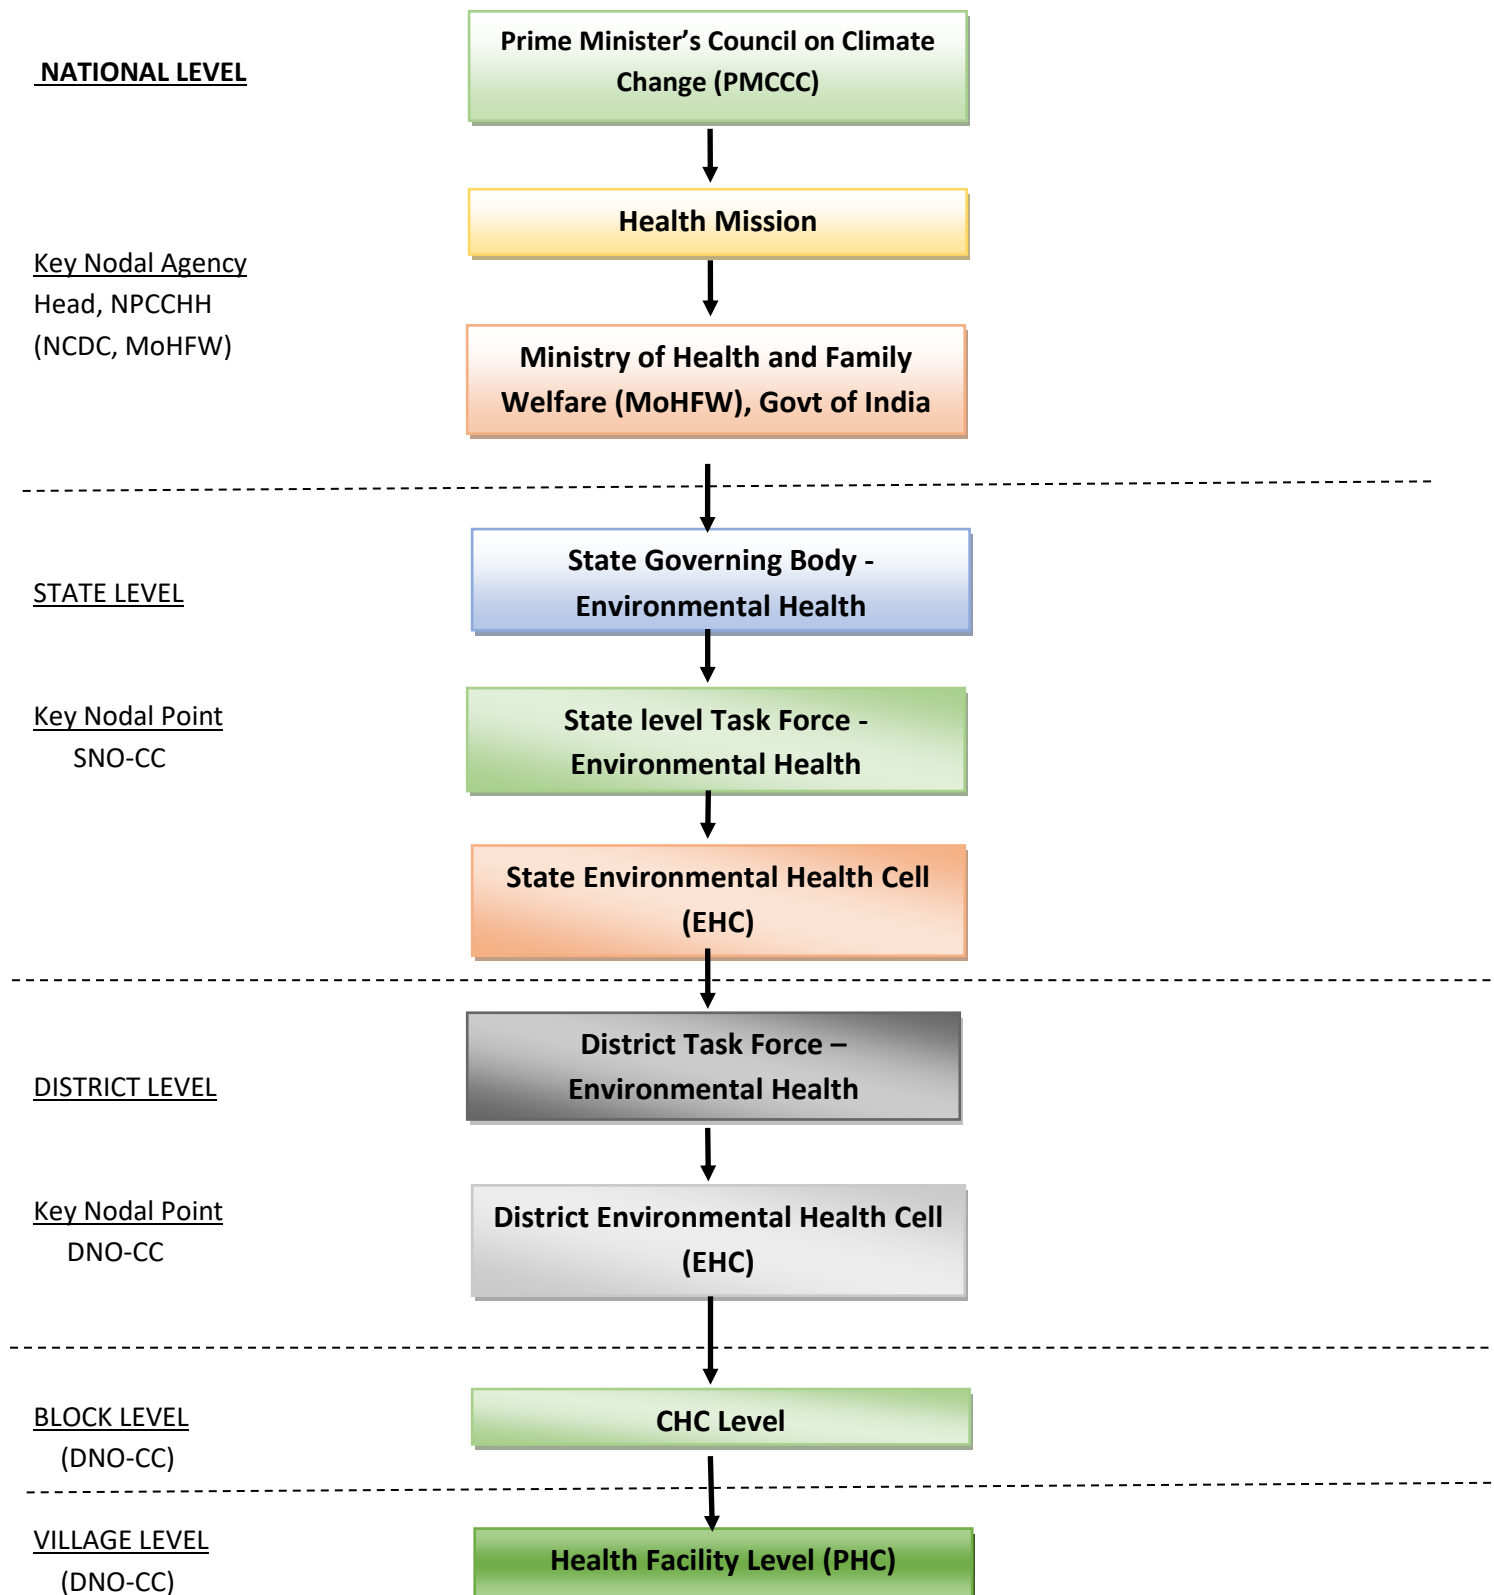

To develop partnerships and create synchrony/ synergy with other missions and ensure that health is adequately represented in the climate change agenda in the state in coordination with the Ministry of Health & Family Welfare.

##### Objective 5:

To strengthen state research capacity to fill the evidence gap on climate change impact on human health

## Chapter 5

### SAPCCHH: Organisational Framework

#### A) State Level - Governing Body - Environmental Health

The state level governing body for policy level decision shall be working under Chairmanship of Honourable State Health Minister. The other members may be as follows:

<b>Honourable State Health Minister</b>	<b>Chairman</b>
<b>Additional Chief Secretary(Health)</b>	<i>Vice Chairman</i>
<b>Director Health Services/Head of Health System</b>	Member Secretary
<b>Mission Director-National Health Mission</b>	Member
<b>Principal Secretary, Ministry of Revenue (Disaster)</b>	Member
<b>Principal Secretary, Ministry of Agriculture</b>	Member
<b>Principal Secretary, Ministry of Water and Sanitation</b>	Member
<b>Principal Secretary, Ministry of Transport</b>	Member
<b>Principal Secretary, Ministry of Animal Husbandry</b>	Member
<b>Principal Secretary, Ministry of Environment and Forests</b>	Member
<b>Principal Secretary, Ministry of Women and Child Development / Social Justice</b>	Member
<b>Principal Secretary, Ministry of Science and Technology/ Earth Sciences</b>	Member
<b>Principal Secretary, Ministry of Education</b>	Member
<b>Principal Secretary, Ministry of Human Resource Development</b>	Member
<b>Principal Secretary, Ministry of Public Works Department</b>	Member
<b>Principal Secretary, Ministry of Power</b>	Member
<b>Principal Secretary, Ministry of Urban Development (Municipalities)</b>	Member
<b>Principal Secretary, Ministry of Finance</b>	Member
<b>Principal Secretary, Ministry of Law</b>	Member
<b>Principal Secretary, Ministry of Food and Civil Supplies</b>	Member
<b>Principal Secretary, Ministry of Panchayati Raj</b>	Member
<b>Regional Director -Health &amp; Family Welfare (GoI)</b>	Member
<b>Director Medical Education and Research</b>	Member
<b>State Nodal Officer- Climate Change</b>	Member
<b>Head – NAPCCHH, CEOH&amp;CCH Division, NCDC</b>	Member

#### B) State Level Task Force - Environmental Health

This task force shall be working under the guidance of Principal Secretary (Health) of the state. It shall be directly overseeing the implementation of the State Action Plan for Climate Change and Human Health (SAPCCHH) in their state/UT. It shall be working through Directorate of Health Services (DHS) of the state, which will be the implementing agency for SAPCCHH.

The State level Task Force shall have inter-ministerial members which are suggested as:

<b>Principal Secretary(Health)</b>	<b>Chairperson</b>
<b>Mission Director-National Health Mission</b>	Vice Chairman
<b>Director Health Services/Head of Health System</b>	Member Secretary
<b>Director/ Chairman - Department of Revenue (Disaster)</b>	Member
<b>Director/ Chairman - Department of Agriculture</b>	Member
<b>Director/ Chairman - Department of Water and Sanitation</b>	Member
<b>Director/ Chairman - Department of Transport</b>	Member
<b>Director/ Chairman - Department of Animal Husbandry</b>	Member
<b>Director/ Chairman - Department of Environment and Forests</b>	Member
<b>Director/ Chairman - Department of Women and Child Development / Social Justice</b>	Member
<b>Director, Meteorological department of State/UT</b>	Member
<b>Director/ Chairman - Department of Public Works Department</b>	Member
<b>Director / Chairman – Department of Urban Development (Municipalities)</b>	Member
<b>Director/ Chairman - Department of Education</b>	Member
<b>Director/ Chairman - Department of Food and Civil Supplies</b>	Member
<b>Director/ Chairman - Department of Human Resource Development</b>	Member
<b>Director/ Chairman - Department of Power</b>	Member
<b>Director/ Chairman - Department of Finance</b>	Member
<b>Director/ Chairman - Department of Law</b>	Member
<b>Director/ Chairman - Department of Panchayati Raj</b>	Member
<b>Director/ Chairman - State Ground Water Board</b>	Member
<b>Head - State disaster Management Authority</b>	Member

Environmental Engineer/ Scientist from Ministry of Environment	Member
Chairman, State Pollution Control Board	Member
Regional Director -Health & Family Welfare (GoI)	Member
Director Medical Education and Research	Member
State Nodal Officer- Climate Change	Member
Director, ICMR Institute/Centre (If any branch in the State/UT)	Member
State Surveillance Officer	Member
Head – NAPCCHH, CEOH&CCH Division, NCDC, MoHFW	Member
Head, NCDC Branch of the state	Member

The Task force of the State/ UT's Environmental Health Cell will coordinate with the Centre (MoHFW, NCDC ) for execution of state/ UTs SAPCCHH.

DHS will create an ***Environmental Health Cell*** within State Health Department, and will identify a ***Nodal Officer*** from Health department which preferably should be a senior Public Health Expert of the state.

The proposed State Level Structure of Environmental Health Cell is as follows:

### C) Structure at State/ UT Environment Health Cell:

Nodal Officer (Public Health Expert - State Health Department)	1
Consultant-Capacity building/ Training/ HR Management	1
Consultant-Environmental Health	1
Data Manager & Analyst	1
Secretarial Assistants cum Data entry Operator	1

#### **D) Executive Members of EHC**

<b>State Nodal Officer- Climate Change</b>	<b>Chairman</b>
<b>State Program Manager - NHM</b>	Member
<b>Additional Director Public Health/NCD</b>	Member
<b>Additional Director NVBDCP</b>	Member
<b>Additional Director Immunization / Family Welfare</b>	Member
<b>Additional Director Medical (Mental Health)</b>	Member
<b>State Surveillance Officer/ Additional Director Epidemic</b>	Member
<b>Head, State Nutrition Bureau</b>	Member
<b>Consultant, SHSRC</b>	Member
<b>Additional Director , IEC/ State Mass Media</b>	Member
<b>State Epidemiologist, IDSP</b>	Member
<b>State Veterinary Consultant</b>	Member
<b>Microbiologist , IDSP</b>	Member

#### **Roles and Responsibilities of the State/ UT Environmental Health Cell**

- Preparation and Implementation of State Action Plan for Climate Change and Human Health
- Conduct Vulnerability assessment and risk mapping for commonly occurring climate sensitive illnesses in the state/ UT.
- Assessment of needs for health care professionals (like training, capacity building) and organise training, workshop and meetings.
- Maintain State and District level data on physical, financial, epidemiological profile for climate sensitive illnesses.
- Ensure Convergence with NHM activities and other related programs in the State / District
- Monitor programme, Review meetings, Field observations.

- Timely issue of warning/ alerts to health professionals and related stakeholders as well as general public through campaign or using mass media (Electronic or printed),
- Social mobilization against preventive measures through involvement of women's self-help groups, community leaders, NGOs etc.
- Advocacy and public awareness through media (Street Plays, folk methods, wall paintings, hoardings etc.)
- Conduction of operational research and evaluation studies for the Climate change and its impact on human health.

#### **E) District Level:**

The DHS will appoint the District Medical Officer/ Chief Medical Health Officer as the District Nodal Officer – Climate Change. A District Level Task Force will be constituted by the District Nodal Officer- Climate Change in consultation with the SNO-CC.

#### **Structure of District Level Task Force- Environmental Health**

<b>District Collector</b>	<b>Chairman</b>
<b>Dean – Govt Medical College in the district/ Head- Department of Community Medicine of the Medical College</b>	Vice Chairman
<b>Chief Medical Officer/ District Medical Officer / District Nodal Officer – Climate Change.</b>	<i>Member Secretary</i>
<b>District Surveillance Officer</b>	Member
<b>District Programme Manager - NHM</b>	Member
<b>District Head, Department of Revenue (Disaster)</b>	Member
<b>District Head, Department of Agriculture</b>	Member
<b>District Head, Department of Water and Sanitation</b>	Member
<b>District Head, Department of Transport</b>	Member
<b>District Head, Department of Animal Husbandry</b>	Member
<b>District Head, Department of Environment and Forests</b>	Member
<b>District Head, Department of Women and Child Development / Social Justice</b>	Member
<b>District Head, Department of Science and Technology/ Earth Sciences</b>	Member
<b>District Head, Department of Education</b>	Member

<b>District Head, Department of Food</b>	Member
<b>District Head, Department of Human Resource Development</b>	Member
<b>District Head, Department of Public Works Department</b>	Member
<b>District Head, Department of Power</b>	Member
<b>District Head, Department of Finance</b>	Member
<b>District Head, Department of Law</b>	Member
<b>District Head, Department of Panchayati Raj</b>	Member

The District Environmental Health Cell will be constituted by the District Nodal Officer- Climate Change in consultation with the SNO-CC At District level, a District Environmental Health Cell shall be constituted; which shall be comprise of the following:

#### **F) Structure at District Environment Health Cell:**

<b>District Nodal Officer- Climate Change</b>	<b>Chairman</b>
<b>District Veterinary officer</b>	Member
<b>District Surveillance Officer/ District Epidemic Officer</b>	Member
<b>District RCH officer/FW Officer</b>	Member
<b>District Epidemiologist</b>	Member
<b>District Microbiologist</b>	Member
<b>District Immunisation Officer</b>	Member
<b>District Training Officer</b>	Member
<b>Data entry operator</b>	Supporting

#### **Roles and Responsibilities of the District Environmental Health Cell**

- Preparation and Implementation of District Action Plan for Climate Change and Human Health.

- Conduct Vulnerability assessment and risk mapping for commonly occurring climate sensitive illnesses in the district.
- Maintain and update district database of illnesses identified in the district.
- Assess needs for health care professionals and conduct sub-district/ CHC level training/ workshop and meetings for capacity building.
- Ensure appointment of contractual staff and engage them in the assigned task of data management under the NAPCCHH.
- Maintain District level data on physical, financial, epidemiological profile for these illnesses.

### Community Health Centre Level

The proposed CHC Level Structure is as under:

• Medical Superintendent (CHC Hospital)	: Chairman
• Taluka Health Officer/ Talukas Health Officer	: Member Secretary
• Health Education Officer/ Similar Post	: Member
• Block Development Officer	: Member
• Health Supervisor	: Member

### Health Facility Level (PHC):

At the health facility, the responsibility for implementation will lie with the Medical Officer (In-charge) of the facility. The existing machinery of NHM will be utilised for the related activities. The RogiKalyanSamiti (RKS) would be reviewing and monitoring implementation at the health facility level. The ANM, ASHA and Anganwadi worker will assist in activities related to implementation of action plan at local level

## Chapter 6

### **Health Adaptation Plan for Acute Respiratory Illnesses attributed to Air Pollution**

Air pollution is a major environmental risk to health. The formation, transport and dispersion of many air pollutants is determined partly by climate and weather factors such as temperature, humidity, wind, storms, droughts, precipitation and partly by human activities known to produce various air pollutants. It is thus logical to assume that climate change will influence the dynamics of air pollution. By reducing air pollution levels, states can reduce the burden of disease from stroke, heart disease, lung cancer, and both chronic and acute respiratory diseases, including asthma.

#### **Two major types of Air Pollution:**

1. Ambient (Outdoor) Air Pollution
2. Household (Indoor) Air Pollution

#### **Define Ambient (Outdoor) Air Pollution and Household (Indoor) Air Pollution**

Outdoor air is often referred to as ambient air. The common sources of outdoor air pollution are emissions caused by combustion processes from motor vehicles, solid fuel burning and industry. Other pollution sources include smoke from bushfires, windblown dust, and biogenic emissions from vegetation (pollen and mould spores).

Just like outdoor air pollution, indoor air pollution can pose a risk to health. As we spend much time in our homes, it is important that the air is as clean as possible. Indoor air pollution can come from sources outside the home, such as emissions from transport or smoke from neighboring wood heaters, and from sources within homes.

Ambient (outdoor air pollution) in both cities and rural areas was estimated to cause 3.7 million premature deaths worldwide in 2012. Air pollution also affects health by causing acid rain; eutrophication due to nitrogen oxides, emission in air from power plants, cars, trucks, and other sources; Haze; toxic effects on wildlife; Ozone depletion; Crop and forest damage etc. Over 4 million people die prematurely from illness attributable to the household air pollution from cooking with solid fuels. 3.8 million premature deaths annually

from non-communicable diseases including stroke, ischemic heart disease, chronic obstructive pulmonary disease (COPD) and lung cancer are attributed to exposure to household air pollution.

**Prominent causes of Ambient Air Pollution in Maharashtra state:**

1. Pollution by Automobiles
2. Industrial Emission

**Prominent causes of Household Air Pollution in Maharashtra state:**

1. Use of biomass, kerosene as fuel for cooking
2. Burning of waste, cow dung, coal

**Other factors (if any) contributing to increase/ decrease of Ambient/ Household air pollution in the polluted cities in the (name) state.**

1. Diesel Generators
2. Incomplete combustion

**Health consequences of air pollution:**

Exposure to high levels of air pollution can cause a variety of adverse health outcomes. It increases the risk of respiratory infections, heart disease and lung cancer. Both short- and long-term exposure to air pollutants have been associated with health impacts. More severe impacts affect people who are already ill. Children, the elderly and poor people are more susceptible. The most health-harmful pollutants closely associated with excessive premature mortality – are fine PM<sub>2.5</sub> particles that penetrate deep into lung passageways.

**Air Pollution and Climate Change**

Air pollution and climate change affect each other through complex interactions in the atmosphere. Air pollution is intricately linked with climate change because both problems come largely from the same sources, such as emissions from burning fossil fuels. Both are threats to people's health and the environment worldwide.

Climate change affects air quality, which in turn can lead to adverse health outcomes. Disruptions to weather patterns influence our air quality by increasing and distributing air pollutants, such as ground-level ozone, fine particulates, wildfire smoke, and dust. Changes

to weather seasons also impact the production, distribution, and severity of airborne allergens.

Air pollution exposure is associated with oxidative stress and inflammation in human cells, which may lay a foundation for chronic diseases and cancer. In 2013, the International Agency for Research on Cancer of the World Health Organization (WHO) classified air pollution as a human carcinogen.

**Air Quality Index:** Air Quality Index is a tool for effective communication of air quality status to people in terms, which are easy to understand. It transforms complex air quality data of various pollutants into a single number (index value), nomenclature and colour.

Air Quality Index (AQI) Category	
Good	0-50
Satisfactory	51-100
Moderately Poor	101-200
Poor	200-300
Very Poor	300- 400
Severe	401-500

**Number of AQI monitoring stations within state:**

1. By Central Pollution Control Board (CPCB) - 36
  2. BY State Pollution Control Board (SPCB)- 45
  3. By System of Air Quality and Weather Forecasting and Research (SAFAR) – 20
- Enlist the probable causes of air pollution in the cities having AQI level (Highest AQI value available in the previous year) above 200: -
1. Automobiles
  2. Dust generated by construction industries and factories

**Priority City/District for Air Pollution Surveillance as per above AQI (Highest AQI value available in the previous year)**

S.No.	Name of the city	Highest AQI value in previous year	Reasons for High AQI
1	Mumbai	Very unhealthy or worse category	Automobiles, Pollution from industries, Dust
2	Thane		
3	Pune		
4	Nagpur		
5	Aurangabad		
6	Raigad		

**Names of Cities identified under National Clean Air Program (NCAP) in the Maharashtra:**

Akola, Amravati, Aurangabad, Badlapur, Chandrapur, Jalgaon, Jalna, Kolhapur, Latur, Mumbai, Nagpur, Nashik, Navi Mumbai, Pune, Sangli, Solapur, Thane, Ulhasnagar

**Vulnerability Assessment for air pollution:**

**Data of vulnerable population district wise:**

Following group of people having high risk towards hazards of air pollution.

**Vulnerable population for health impact of Air pollution for each district- STATE WISE**

Sr. No	Category of vulnerable population	Total count for the district
1	Elderly people age more than 60 years	9.9 % of the entire population
2	Children's below 5 years of age	13,326,517
3	Pregnant women	

4	Traffic policemen	2 lakhs
5	Road sweepers	
6	Auto-rickshaw drivers	5 lakhs
7	Rickshaw pullers	
8	Roadside vendors	
9	Construction Workers	13 lakhs
10	Women's not having clean fuel for cooking	
11	People having any pre-existing lung disease like asthma, COPD, Bronchitis, TB, lung cancer etc	15.4% in the age group 40 and above
12	Individuals with heart disease, coronary artery disease or congestive heart failure	40% in the age group 40 and above

**Risk Mapping to identify the 'Hot spots' for vulnerable population with respect to health infrastructure and other resources for air pollution**

- Identification of Vulnerable group of population living in areas with poor air quality
- Identifying the major sources of pollution
- Availability of healthcare services in high priority districts
- Building the capacity of health care personnel on managing diseases arising from polluted air
- Sensitizing the health system on the impact of air pollution
- Creating awareness among the vulnerable population on appropriate behaviour and preventive methods
- Advocacy for stronger regulations on industries and factories responsible for air pollution

## Health Sector Adaptation plan for Air Pollution Control

Health action plan on 'Air Pollution and Health in Maharashtra State is being developed to protect, prevent control health problems and reduce morbidity and mortality due to illnesses related to air pollution.

## Awareness Generation

- IEC dissemination
- Carry out mass media campaigns
- Promote a culture of risk prevention, mitigation, and better risk management
- Promote attitude and behaviour change in the awareness campaigns linking air pollution and climate change.
- Engage local and regional media (community radio, TV)

## Sensitisation workshops

Various levels of Training	Topics	Timeline
Sensitization workshops for State Level officers	Introduction Air pollution its impact  Role and responsibilities of state and regional level officers	October - November
Sensitization workshops for District Level officers	Introduction Air pollution its impact  Role and responsibilities of District level officers	December
Panchayati Raj Institute Workshops	Prevention measures of Air pollution  Role and responsibilities of PRI	January

## IEC Plan for next five years

Sr. No	Indicator Statement	Indicator	Target 2022-23	Target 2023-24	Target 2024-25	Target 2025-26	Target 2026-27
1.	IEC campaigns	Percentage of Districts implemented IEC campaign on heat related illnesses	50%	100%	100%	100%	100%
2	PRI and VHNC sensitization	Percentage of Districts included climate sensitive issues in the VHSNCs	25%	50%	75%	100%	100%
3	Community participation	Sensitization of rural population for Air pollution	Pilot study in one district	5 districts	50 %	75 %	100%

## IEC activities for Air pollution

- At least 1-2 Wall Poster disseminated in all healthcare facilities.
- Social Media – active circulation of audio-video clips and poster slideshow in prominent social media handles.
- Radio jingles during March to July in high priority districts
- Sensitization workshops for district , state and regional level officers
- Community participation through meetings, heat related illness education in school, panchayati raj institutes and gram sabhas.

Year	IEC Content	Districts	Dissemination Plan for 5 (Years)	Time Line	Budget (Lakh)
<b>2022-23</b>	Posters	All districts	At least 2 posters for each health facilities	September 22- February 23	30 lakh
	Radio Jingles	High Priority Districts Low Priority Districts	Radio Jingles during winter season		
	TV Spots	All Districts	TV spots		
<b>2023-24</b>	Posters Radio Jingles TV Spots	All districts	At least 2 posters for each health facilities  Radio Jingles during winter season  TV spots	September 23- February 24	33 lakh
<b>2024-25</b>	Posters Radio Jingles TV Spots	All districts	At least 2 posters for each health facilities  Radio Jingles during winter season  TV spots	September 24- February 25	36.60 Lakh
<b>2025-26</b>	Posters Radio Jingles TV Spots	All districts	At least 2 posters for each health facilities  Radio Jingles during winter season  TV spots	September 25- February 26	40.26 Lakh
<b>2026-27</b>	Posters Radio Jingles	All districts	At least 2 posters for each health facilities  Radio Jingles during	September 26- February 27	44.28 Lakh

TV Spots

winter season

TV spots

## Public Health Advisories

Health advisories ([bit.ly/NPCCHHPrg](http://bit.ly/NPCCHHPrg)) are issued to alert population of potential harmful impact of impending environmental phenomena like cold wave/frost, heat wave and elevated air pollution. Advisories are issued at central level and forwarded to Districts through State/UTs for public dissemination.

District will be ensure timely dissemination of health advisories in locally acceptable language.

**ADVISORY ON AIR POLLUTION AND HEALTH**

**What is Air Pollution?**

Air pollution is the contamination of indoor or outdoor air by a range of gaseous and solid particles that modify natural characteristics of air we breathe. Key health harmful pollutants include particulate matter (PM2.5 and PM10), carbon monoxide (CO), ozone (O3), black carbon (BC), sulfur dioxide and nitrogen oxides (Nox). Air pollution is often not visible to the naked eye as the sizes of the pollutants are smaller than the human eye can detect.

**What are major sources of Air Pollution?**

Ambient (outdoor) air pollution is caused by factors such as vehicular exhaust, road dust, construction dust, burning of garbage, burning of agricultural crop residues, industrial emissions, fossil fuel fired thermal power plants and brick kilns, burning of biomass in households, burning of firecrackers etc.

Household air pollution is caused by burning biomass such as wood, coal, dung, kerosene in chulhas or fireplaces for cooking and heating purposes. Indoor air pollution is caused by burning mosquito coils, incense sticks, cigarettes, bidis, use of sprays, solvents, and fumes from chemicals used in building interiors etc.

**Air Quality**

Air Quality Index (AQI) is a tool based on ambient concentration values of air pollutants and is categorized as Good, Satisfactory, Moderately polluted, Poor, Very Poor, and Severe. Worsening of Air Quality Index especially when in range of 'poor to severe' in an area may result in increase in morbidity and mortality among the exposed people.

Air Quality Index (AQI) (Pollution level)	Possible Health Consequences	General Population	Vulnerable Population*
Good (0-50)	Low risk	No special precautions	No special precautions
Satisfactory (51-100)	Minor breathing discomfort in vulnerable population	No special precautions	Do not prolong or strenuous outdoor physical activities
Moderate (101-200)	Breathing or other health related discomfort in vulnerable population	Do not prolong or strenuous outdoor physical activities	Avoid prolonged or strenuous outdoor physical activities
Poor (201-300)	Breathing discomfort in healthy people on prolonged exposure. Breathing or other health related discomfort in vulnerable population or short exposures	Avoid outdoor physical activities	Avoid outdoor physical activities
Very Poor (301-400)	Breathing distress in healthy people on prolonged exposure. Prolonged respiratory or other discomfort in vulnerable population or short exposures	Avoid outdoor physical activities, especially during morning and late evening hours	Remain indoors and keep activity levels low
Severe (401-500)	Respiratory distress in healthy people on prolonged exposure. Severe respiratory or other diseases in vulnerable population or short exposures	Avoid outdoor physical activities	Remain indoors and keep activity levels low

\* Vulnerable population (high risk): Elderly, children under 5 years, pregnant women, pre-existing illnesses like asthma and other airway or lung (respiratory) and heart (cardiovascular) diseases

#AQI= Air Quality Index; daily AQI is available on websites 1. CPCB ([https://app.cpcbcr.com/AQI\\_India/](https://app.cpcbcr.com/AQI_India/)) or 2. MAPAN-SAFAR: <http://safar.tropmet.res.in/>

**Health consequences of Air pollution**

Pollution Harms you

The health impacts of air pollution depend on the level of pollution & exposure duration. The individuals' vulnerability to the health impacts of pollution can also differ based on demographic factors and predisposing health conditions. Short-term high-level exposures can result in acute health reactions such as irritation to eyes, nose, and throat, along with coughing, wheezing, chest discomfort and acute upper respiratory tract inflammation and infection, exacerbation of asthma, bronchitis or exacerbation of chronic illnesses such as chronic obstructive pulmonary disease, ischaemic heart disease, and cerebrovascular stroke. Long term exposures to even lower level of pollution can result in chronic illnesses of respiratory and cardiovascular systems, lung cancer and premature death.

**Vulnerable Population**

Following people may be considered vulnerable to health consequences of air pollution -

- Age group** - Individuals who are under five aged children and in old age.
- Pregnant Women** - Exposure during pregnancy may have consequences for child in womb.
- Predisposed health or medical conditions** - Those with pre-existing illnesses of respiratory and cardiovascular system etc. are at high risk.
- Low socio-economic conditions** - Those with poor nutritional status and those living in conditions of poor housing, using fossil fuels for cooking, heating and lighting purposes have high risk.
- Occupational group** - Those with possibility of prolonged exposures such as traffic policemen, traffic volunteers, construction workers, road sweepers, rickshaw pullers, auto-rickshaw drivers, roadside vendors, and others working outdoors in polluted settings are at high risk. Women burning biomass for cooking, and sweeping dust are vulnerable on account of their household work.

**Recommendations for State Health Department**

A. State authorities need to keep a check on Air Quality Index data, available at CPCB and MAPAN-SAFAR website or obtain the same from State Pollution Control Board.

## Observation of the environment-health days

Day	Activities
<b>World Environmental Day</b>  <b>Clean air for blue skies</b>	<ul style="list-style-type: none"> <li>• IEC Campaigns</li> <li>• Workshops for district Nodal officers on Air pollution and its impact on health and strategies to reduce to impact of air pollution</li> </ul>

## Capacity Building

## Training Calendar

Type of Training	Participants	Content of Training	Timeline
<b>State Level ToT</b>	State Level officers, Regional level officers, District level officers	Air pollution its impact and Surveillance	August
<b>District Level Training</b>	District level supervisors, THO	Air pollution its impact and Surveillance	September
<b>Medical Officer Training</b>	Medical officers	Air pollution its impact and Surveillance	October
<b>Paramedical staff training</b>	MPW, ANM, LHV, etc	Air pollution its impact and Surveillance	November
<b>Panchayat Raj Institute training</b>	PRI members	Awareness generation	December

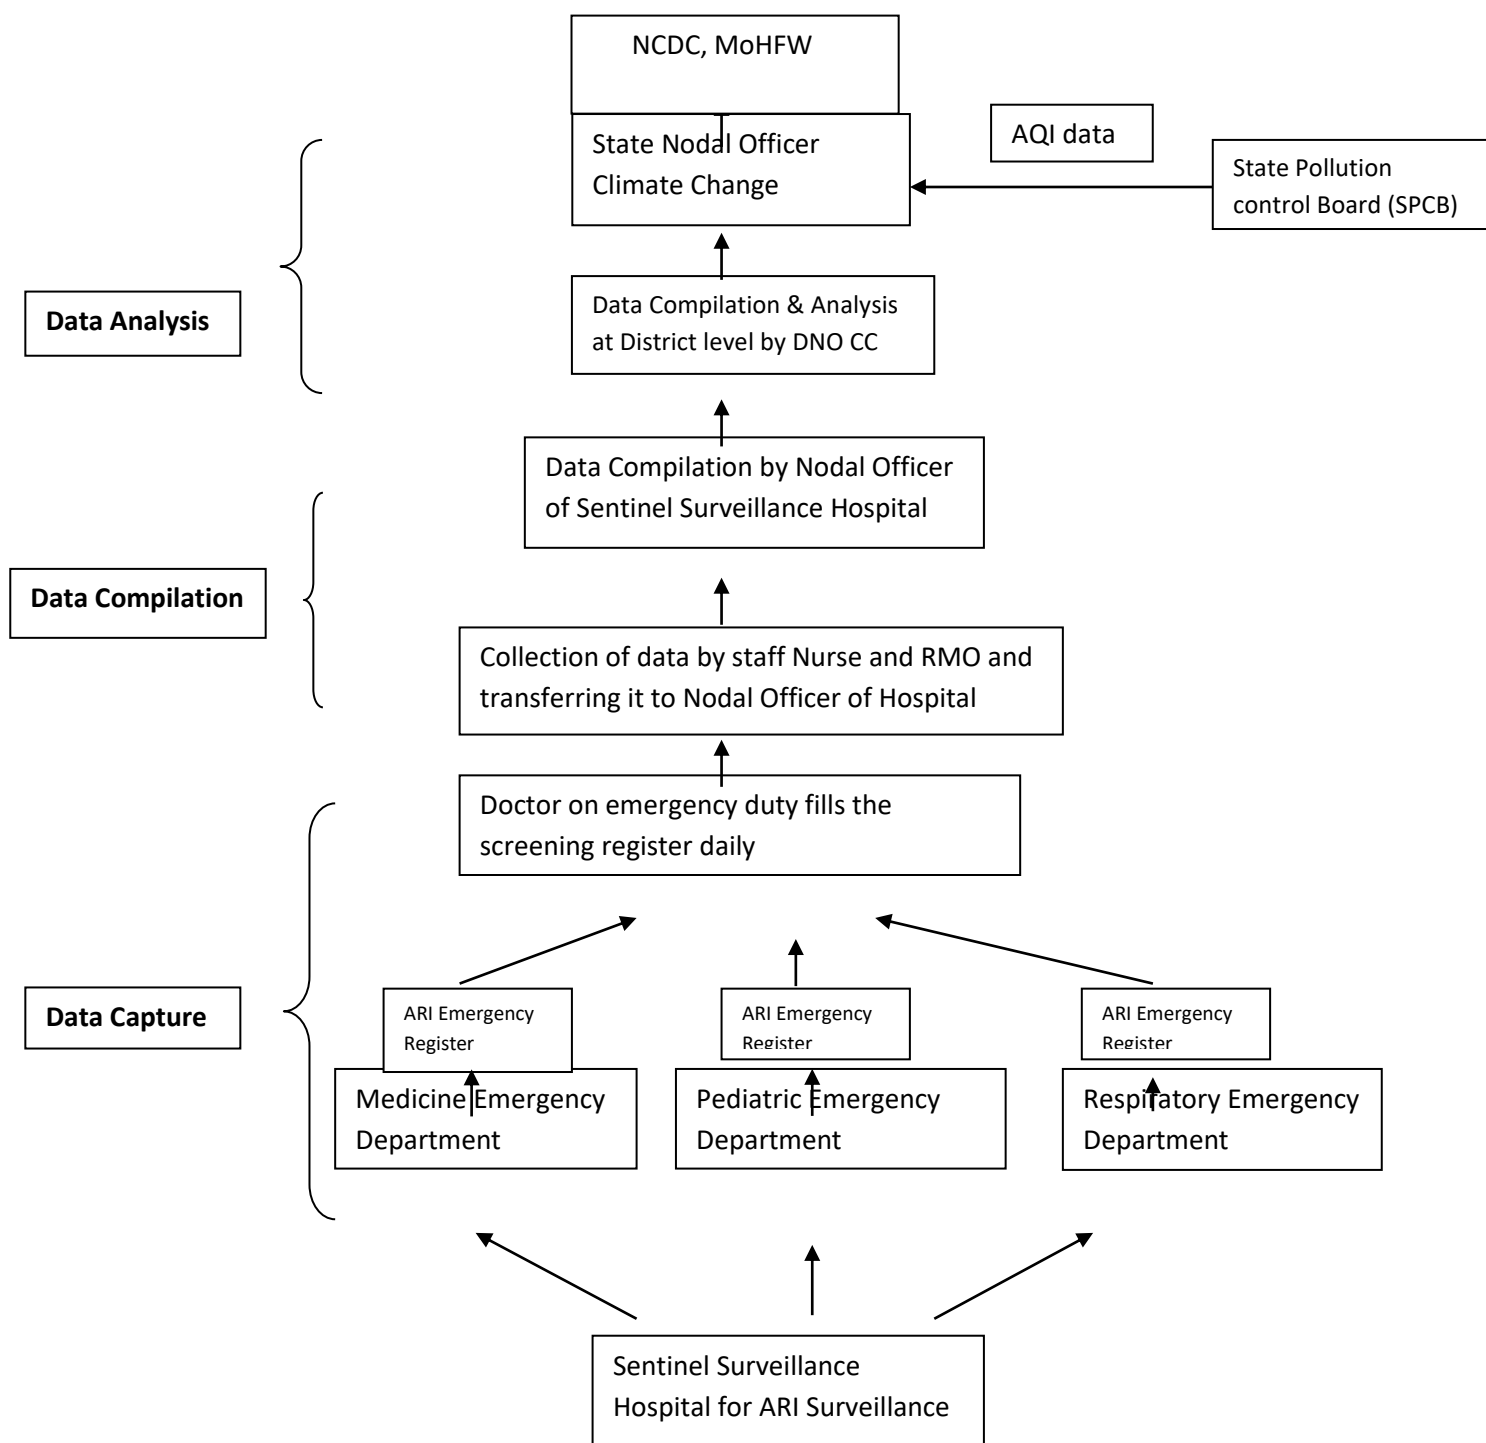

### Budget

Year	Priority Districts	Time of year	Content matter	Budget
<b>2022-23</b>	All district	September 22- February 23	Air Pollution and its impact on Health	37.5 lakh
<b>2023-24</b>		September 23- February 24		40 lakh
<b>2024-25</b>		September 24- February 25		44 lakh
<b>2025-26</b>		September 25- February 26		48 lakh
<b>2026-27</b>		September 26- February 27		52 lakh

### ARI Surveillance Activity at State Level

State has identified 16 sentinel hospital from highly polluted cities of Maharashtra and they are reporting acute respiratory infection cases on monthly basis and these data are compared with air quality of particular city for inference.

### ARI Surveillance at State - Data Flowchart

**Status of ARI Surveillance data collection in Maharashtra**

Name of City	Name of Hospital	Capturing ARI data as per format of annexure 3 from different departments	Data compilation in format of annexure 4	Data is sent to state office on daily basis
<b>Solapur</b>	DR. V.S.Medical College Solapur	Yes	Yes	Yes
<b>Mumbai</b>	JJ Hospital	Yes	Yes	Yes
<b>Nashik</b>	District Hospital Nashik	Yes	Yes	Yes
<b>Amravati</b>	District Hospital Amravati	Yes	Yes	Yes
<b>Sangli</b>	GMC , Sangali	Yes	Yes	Yes
<b>Jalgaon</b>	GMC Jalgaon	Yes	Yes	Yes
<b>Jalna</b>	District Hospital , Jalna	Yes	Yes	Yes
<b>Kolhapur</b>	CPRH, Kolhapur	Yes	Yes	Yes
<b>Latur</b>	GMC Latur	Yes	Yes	Yes
<b>Akola</b>	GMC Akola	Yes	Yes	Yes
<b>Badlapur</b>	RH Badlapur	Yes	Yes	Yes
<b>Ulhasnagar</b>	Central Hospital Ulhasnagar	Yes	Yes	Yes
<b>Aurangabad</b>	GMC Aurangabad	Yes	Yes	Yes
<b>Pune</b>	B. J Medical College, Pune	Yes	Yes	Yes
<b>Nagpur</b>	GMC Nagpur	Yes	Yes	Yes
<b>Chandrapur</b>	GMC Chandrapur	Yes	Yes	Yes
<b>New Mumbai</b>	General Hospital Vashi	Yes	Yes	Yes

### Roles and responsibility of a few key members of task force

	Responsibilities
SNO	<ul style="list-style-type: none"> <li>• Finalization of IEC material and dissemination Plan</li> <li>• Organize IEC campaigns at state level on observance of important environment-health days</li> <li>• Organize training sessions for district level and surveillance nodal officer</li> <li>• Facilitate training of medical officers in clinical aspects of air pollution's health impact</li> <li>• Real time air quality data dashboard in Proposed cities</li> <li>• MonitorAQI levels in states especially in hotspots and NCAP cities</li> <li>• Ensure reporting from sentinel hospitals and DNO</li> <li>• Ensure necessary health facility preparedness</li> <li>• Review surveillance reporting and monthly report submission by DNO</li> <li>• Submit report of activities</li> <li>• Review implementation of IEC and surveillance activities at all levels</li> <li>• Evaluate and update relevant section of SAPCCHH with support from State Task Force</li> <li>• Liaison with State Pollution Control Board for AQI alerts and its dissemination</li> <li>• Liaison with Department of Environment for combined IEC campaigns and information sharing on health indicators for targeted air pollution reduction activities</li> <li>• Awareness and action plan input sharing with Ahmedabad Municipal corporation, Vadodara Municipal corporation and Surat Municipal corporation</li> <li>• Create organization support and strengthen Environmental Health cell to implement NPCCHH vision, Goal and Objectives</li> <li>• Organize sensitization workshops for other stakeholders and line departments</li> <li>• Organize Seminars on Air Pollution and Conference to share knowledge and action under NPCCHH.</li> <li>• Collaborate with academic institute/s for support in updating SAPCCHH, Surveillance activity monitoring, vulnerability assessment and applied research</li> <li>• Advocate for reduction in source of air pollution</li> </ul>
DNO	<ul style="list-style-type: none"> <li>• Ensure IEC dissemination to community level</li> <li>• Facilitate community level IEC activities</li> <li>• Conduct training for Block health officers, Medical officer, Sentinel hospital nodal officers with relevant training manuals</li> <li>• Conduct training of vulnerable groups: police officers, outdoor works, women, children</li> <li>• Organize IEC campaigns at district level on observance of important</li> </ul>

	<p>environment-health days</p> <ul style="list-style-type: none"> <li>• Collect and monitor AQI levels in states especially in hotspots and NCAP cities</li> <li>• Ensure daily reporting from Sentinel hospitals and compile the data</li> <li>• Analyze daily health data with AQI level to monitor trends and hotspot in health impacts</li> <li>• Submit analyzed monthly report to SNO, NPCCHH, Hq and other departments for necessary action</li> <li>• Submit report of activities</li> <li>• Update DAPCCHH with support from District Task Force</li> <li>• Advocate for reduction in source of air pollution</li> </ul>
Surveillance hospital nodal officer	<ul style="list-style-type: none"> <li>• Train hospital staff and clinician responsible for daily reporting in case indentation and reporting flow</li> <li>• Compile daily reports for the health facility and submit it to DNO and NPCCHH, Hq</li> </ul>
- Block health officer	<ul style="list-style-type: none"> <li>• Conduct community level IEC activities</li> <li>• Ensure training of medical officers</li> <li>• Organize PRI sensitization workshop and training for vulnerable groups</li> </ul>
Medical officer	<ul style="list-style-type: none"> <li>• Conduct health facility-based IEC activities</li> <li>• Support community level IEC activities</li> <li>• Be aware of AQI levels and health impact of air pollution</li> <li>• Ensure necessary health facility preparedness in early diagnosis and management of cases</li> </ul>
Panchayati Raj Institutions	<ul style="list-style-type: none"> <li>• Conduct community level IEC activities</li> </ul>

## Chapter 7

### Health adaptation plan for Heat related illnesses

#### Maharashtra

##### Introduction

In India, heat wave is considered if maximum temperature of a station reaches at least 40°C or more for plains, 37°C or more for coastal stations and at least 30°C or more for hilly regions. Following criteria are used to declare a heat wave:

##### a) Based on Departure from Normal

- *Heat Wave*: Departure from normal is 4.5°C to 6.4°C
- *Severe Heat Wave*: Departure from normal is >6.4°C

##### b) Based on Actual Maximum Temperature (for plains only)

- *Heat Wave*: When actual maximum temperature  $\geq 45^{\circ}\text{C}$
- *Severe Heat Wave*: When actual maximum temperature  $\geq 47^{\circ}\text{C}$

**The Heat Index** is a measure of how it really feels when relative humidity is factored in with the actual air temperature. If the temperature is 34 degree C and relative humidity is 75 %, the heat index i- how it feels – is 49 degree C. The same effect is reached at just 31 degree C when relative humidity is 100 %. The adverse health effects of hot weather and heat-waves are largely preventable. Prevention requires a portfolio of actions at different levels, these actions can be integrated in a defined heat–health action plan.

National Disaster Management Authority (NDMA) prepared Guidelines for Preparation of Action Plan-prevention and management of Heat wave-2017, wherein the roles and responsibilities of various agencies were identified. Emergency Medical Relief (EMR), Ministry of Health and Family Welfare prepared detailed guidelines on prevention and management of heat related illnesses – 2015 wherein patho-physiology, risk factors, clinical manifestations, management, prevention and public health action plan for managing heat related illnesses has been explained. To declare a heat wave, the above criteria should be met at least at two stations in a Meteorological sub-division for at least two consecutive days. A heat wave will be declared on the second day.

Maharashtra State is one of the regions most affected by heat waves in India (NRDC 05/2020). Vidharbha, Marathwada and some districts of North Maharashtra district as well.

Maharashtra developed a state-wide Heat Action Plan in 2017. The Nagpur Municipal Corporation developed their heat action plan in 2016 and updated its Heat Action Plan in 2019 along with five neighbouring districts. The Heat action plan consists of heat mitigation measures in accordance with the guidelines issued by NDMA. Prior to the 2020 heat season, two out of seven municipal corporations in Maharashtra, Nagpur and Chandrapur, have implemented the mandatory Heat Action Plan. Nashik, Dhule, Jalgaon, Gondia and Wardha were yet to introduce the updated plan but several of these cities have earlier plans. Maharashtra is also observing higher temperatures in coastal cities, such as Mumbai, Dapoli, and Ratnagiri.

### Different type of heat related illness includes:

1. Minor heat related Illnesses: Heat rash, heat cramps, heat syncope
2. Major heat related Illnesses: Heat Exhaustion and heat Stroke

### Types of heat related illnesses

Clinical Entity	Age Range	Setting	Cardinal Symptoms	Cardinal / Important Signs	Pertinent Negative findings
Heat rash/ prickly heat/ Miliaria	All, but frequently children	Hot environment; +/- insulating clothing or swaddling (wrap in tight clothes)	<b>ITCHY RASH</b> with <b>SMALL RED BUMPS</b> at pores in the skin. Seen in setting of heat exposure; bumps can sometimes be filled with clear or white fluid	<b>DIFFUSED RED COLOUR SKIN OR VESICULAR RASH</b> , itching of the skin without visible eruption	<b>NOT FOCALLY DISTRIBUTED</b> like a contact dermatitis
Heat cramps	All	Hot environment, <b>TYPICALLY WITH EXERTION</b> , +/- insulating clothing	<b>PAINFUL SPASMS</b> of large and frequently used muscle groups	Uncomfortable appearance, may have <b>DIFFICULTY FULLY EXTENDING AFFECTED LIMBS/JOINTS</b>	No contaminated wounds/tetanus exposure; no seizure activity
Heat exhaustion	All	Hot environment; +/- exertion; +/- insulating clothing or swaddling (wrap in a tight clothes)	Feeling overheated, light headedness, <b>EXHAUSTED AND WEAK</b> , unsteady, feeling of <b>VOMITING</b> , <b>SWEATY AND</b>	<b>SWEATY</b> /diaphoretic; flushed skin; hot skin; <b>NORMAL CORE TEMPERATURE</b> ; +/- dazed, +/- generalized weakness, slight disorientation	No coincidental signs and symptoms of infection; no focal weakness; no difficulty in swallowing food or speech; no overdose history

			<b>THIRSTY</b> , inability to continue activities		
Heat syncope	Typically adults	Hot environment; +/- exertion; +/- insulating clothing or swaddling (wrap in a tight clothes)	Feeling hot and weak; light headedness followed by a <b>BRIEF LOSS OF CONSCIOUSNESS</b>	Brief, generalized loss of consciousness in hot setting, short period of disorientation, if any	<b>NO SEIZURE ACTIVITY</b> , no loss of bowel or bladder continence, no focal weakness, no difficulties in food swallowing or speech
Heat Stroke	All	Hot environment; +/- exertion; +/- insulating clothing or swaddling (wrap in a tight clothes)	Severe overheating; profound weakness; <b>DISORIENTATION, NOT FULLY ALERT, CONVULSION, OR OTHER ALTERED MENTAL STATUS</b>	Flushed, <b>DRY SKIN</b> (not always), <b>CORE TEMP <math>\geq 40^{\circ}\text{C}</math> OR <math>104^{\circ}\text{F}</math></b> ; altered mental status with disorientation, incoherent behaviour, <b>COMA, CONVULSION</b> ; tachycardia; +/- hypotension	No coincidental signs and symptoms of infection; no focal weakness; no difficulties in swallowing food or speech, no overdose history

### Heat related illness Status in Maharashtra

Year	HRI Cases	Deaths
<b>2015</b>	28	2
<b>2016</b>	686	19
<b>2017</b>	297	13
<b>2018</b>	2	2
<b>2019</b>	9	9
<b>2020</b>	NA	NA
<b>2021</b>	NA	NA
<b>2022</b>	767	31*

\*Suspected HRI deaths

### Priority Districts for Heat related illnesses (according to Prevalence since 2011-22)

High Priority Districts	Low Priority Districts	Very Low Priority Districts
<b>Nagpur, Chandrapur, Akola, Wardha, Jalgaon, Dhule, Bhandara, Aurangabad, Parbhani, Jalna, Gondia, Osmanabad, Nanded, Amrawati,</b>	Gadchiroli, Solapur, Thane , Mumbai, Raigad, Ratnagiri, Sindhudurg, Latur, Beed, Nashik, Ahmednagar, Palghar, Yavatmal, Washim and Nandurbar	Pune, Satara, Kolhapur, Sangli, Buldhana

### Vulnerability Assessment for heat related illness:

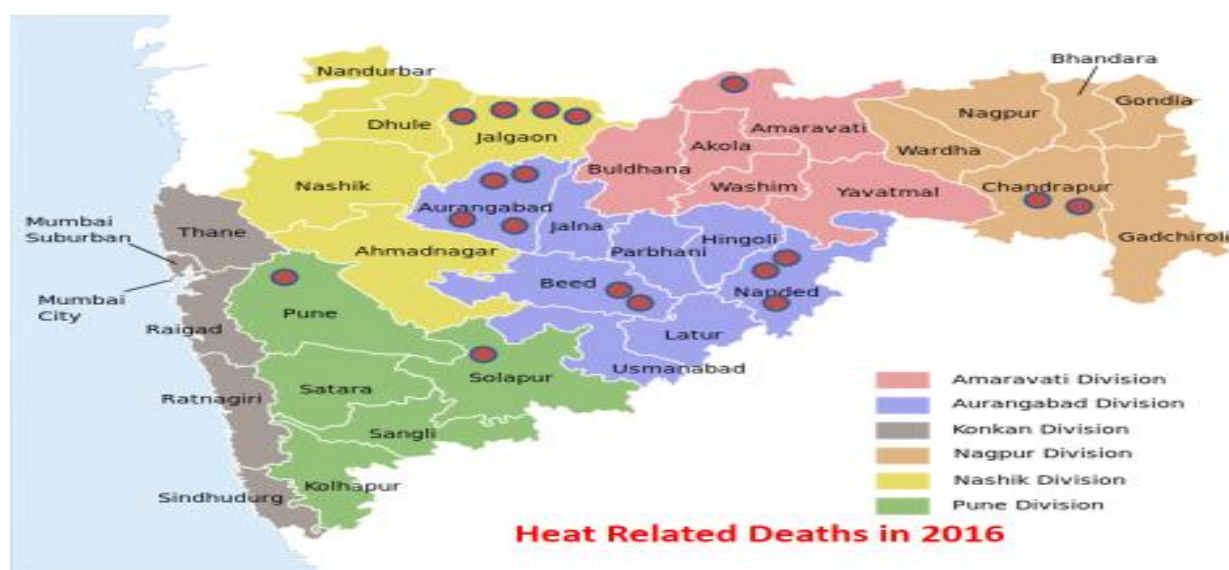

- Children below 5 years and elders above 65 years
- Pregnant women
- Labourers including those at construction sites/ Outdoor workers
- Farmers/ MNREGS workers
- Police personnel/ security staff
- Industrial workers working at High Temperatures
- Street hawkers/ salesmen
- Auto drivers/ Travellers/ Bus drivers
- Coolies/ Slum residents/ Beggars/ Homeless
- Alcoholics, Smokers, Consuming hot drinks oftenly.
- Persons suffering from chronic diseases like Cardiovascular, Renal, Skin, Liver, Diabetes, Obesity, debilitated / malnourished etc.

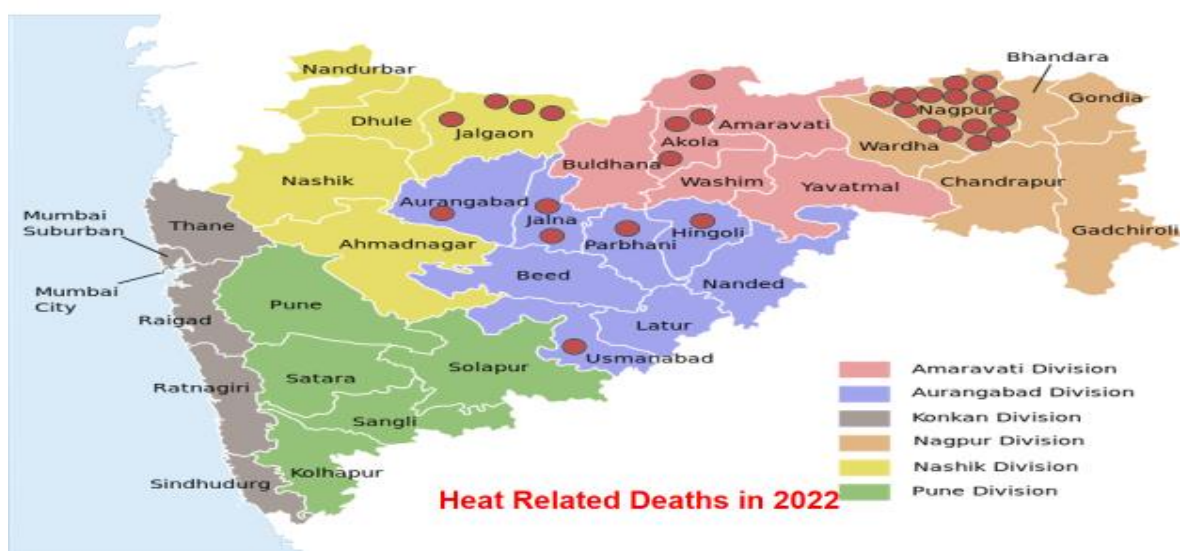

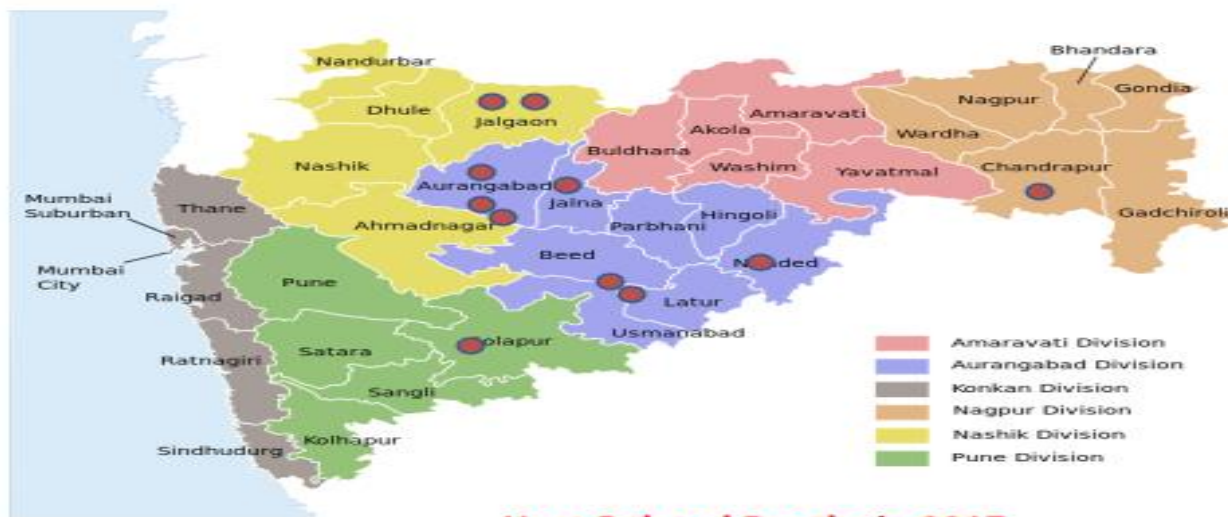

### Data of vulnerable population of State:

Sr. No	Category of vulnerable population	Total count (2011 census)
1	Elderly people age more than 60 years	1.11 Cr
2	Children's below 5 years of age	0.94 Cr
3	Pregnant women	0.20 cr

### Vulnerability assessment

**Figure 1. Distribution of deaths in district wise map of State in the 2016, 2017 and 2022 year**

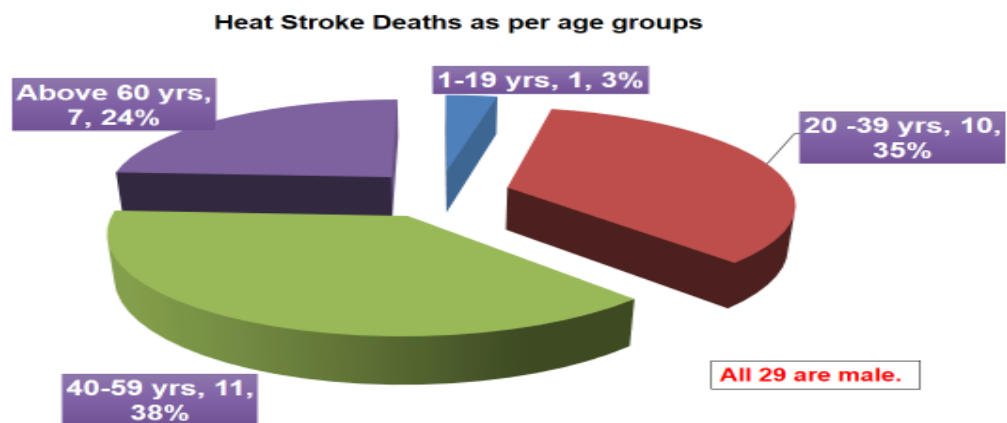

Heat related illnesses data of the State for year 2011-2022

## Age wise distribution of deaths due to heat related illnesses 2022

## Occupational status of deaths due to heat related illnesses in 2022

## Socioeconomic status of cases and deaths due to heat related illnesses till date

## Heat Wave Action Plan in Maharashtra

The Heat-Wave Action plan provides a framework for implementation, coordination and evaluation of extreme heat response activities in districts and cities in state that reduces the negative impact of extreme heat. The heat action plan's primary objective is to alert those populations at risk of heat-related illness in places where extreme heat conditions either exist or are imminent, and to take appropriate precautions, which are at high risk.

The heat-wave action plan is intended to mobilize individuals and communities to help protect their neighbours, friends, relatives, and themselves against avoidable health problems during spells of very hot weather. Broadcast media and alerting agencies may also find this plan useful. Severe and extended heat-waves can also cause disruption to general, social and economic services.

### A. Awareness Activities

To increase general awareness among all the relevant stakeholders including people especially vulnerable communities, health-care providers and policy makers regarding impacts of heat and ways to address them.

#### Sensitization workshop for State and District level Officers

Various levels of Training	Topics	Timeline
Sensitization workshops for State Level officers	Introduction Heat related illness and its important  Role and responsibilities of state and regional level officers	January
Sensitization workshops for District Level officers	Introduction Heat related illness and its important  Role and responsibilities of District level officers	February
Panchayati Raj Institute Workshops	Prevention measures of Heat wave illness  Role and responsibilities of	March

	PRI	
--	-----	--

#### IEC Activities conducted in Maharashtra:

State has developed 5 types of posters and distributed to all district and Municipal corporations (As per annexure). Aware generation about heat related illness on radio by state nodal officers and local news channel by District Nodal Officers. State has shared all health advisory time to time with all districts.

#### IEC Plan for next five years

Sr. No	Indicator Statement	Indicator	Target 2022-23	Target 2023-24	Target 2024-25	Target 2025-26	Target 2026-27
2.	IEC campaigns	Percentage of Districts implemented IEC campaign on heat related illnesses	50%	100%	100%	100%	100%
2	PRI and VHNC sensitization	Percentage of Districts included climate sensitive issues in the VHSNCs	25%	50%	75%	100%	100%
3	Community participation	Sensitization of rural population for HRI	Pilot study in one district	5 districts	50 %	75 %	100%

#### IEC activities for heat related illness

- At least 1-2 Wall Poster disseminated in all healthcare facilities.
- Social Media – active circulation of audio-video clips and poster slideshow in prominent social media handles.
- Radio jingles during March to July in high priority districts
- Sensitization workshops for district , state and regional level officers
- Community participation through meetings, heat related illness education in school, panchayati raj institutes and gram sabhas.

Year	IEC Content	Districts	Dissemination Plan for 5 (Years)	Time Line	Budget (Lakh)
2022-23	Posters	All districts	At least 2 posters for each health facilities	January-February 23	18 lakh
	Radio Jingles	High Priority Districts Low Priority Districts	Radio Jingles during summer season		
	TV Spots	All Districts	TV spots		
2023-24	Posters Radio Jingles TV Spots	All districts	At least 2 posters for each health facilities  Radio Jingles during summer season  TV spots	January-February 24	20 lakh
2024-25	Posters Radio Jingles TV Spots	All districts	At least 2 posters for each health facilities  Radio Jingles during summer season  TV spots	January-February 25	22 lakh
2025-26	Posters Radio Jingles TV Spots	All districts	At least 2 posters for each health facilities  Radio Jingles during summer season  TV spots	January-February 25	25 lakh

## B. Capacity Building

- Clinical management training of HRI for all Physician, district nodal officer and district epidemiologist
- Training for Surveillance of HRI and their reporting for district nodal officer, RMO outreach and district epidemiologist.
- Medical officer training for HRI Clinical management and Surveillance for HRI at district level.

### Training Calendar

Type of Training	Participants	Content of Training	Timeline
<b>State Level ToT</b>	State Level officers, Regional level officers, District level officers	Surveillance, Preventive Measures and Clinical Management	February
<b>District Level Training</b>	District level supervisors, THO	Surveillance, Preventive Measures and Clinical Management	March
<b>Medical Training</b>	<b>Officer</b> Medical officers	Surveillance, Preventive Measures and Clinical Management	April
<b>Paramedical training</b>	<b>staff</b> MPW, ANM, LHV, etc	Surveillance and Preventive measures	April
<b>Panchayat Raj Institute training</b>	PRI members	Awareness generation	April

## Budget

Year	Priority Districts	Time of year	Content matter	Budget
2022-23	All district	March-April	Heat related Illnesses	37.5 lakh
2023-24		March-April		40 lakh
2024-25		March-April		44 lakh
2025-26		March-April		48 lakh
2026-27		March-April		52 lakh

## C. Surveillance Activities

The heat waves are generally experience during the month of March to May in Maharashtra. The districts from Vidharbha, Marathwada, North Maharashtra and few districts from Kokan regions are mainly affected due to heat wave. The daily reporting of heat stroke diseases is started from 1 march to 31<sup>st</sup> July of every year. The every district is collecting information from their health facilities as per case definition.

- Daily monitoring of health related illness from Joint Director of Health Services
- Report shared with NCDC & EMR division New Delhi.
- Guidelines to all health facilities & district and municipal authorities on management of heat related illnesses – Establish heat stroke treatment room.
- Efforts to develop Heat Action Plan
- Coordination with IMD to develop EWS
- IEC for public
- District Level Death Investigation Committee –

It should be three member committee to confirm Heat Stroke Deaths.

This Committee will comprise of –

1. District Civil Surgeon
2. District Surveillance Officer

3. Experts – Physician/ Paediatrician either from GMC or Public health department.

Every suspected death should be investigated & confirmed by District Committee within 3 days of the death

**State has conducted -:**

- Clinical management training of HRI for all Physician, district nodal officer and district epidemiologist
- Training for Surveillance of HRI and their reporting for district nodal officer, RMO outreach and district epidemiologist.
- Medical officer training for HRI Clinical management and Surveillance for HRI at district level.

## Chapter 8

### Health Adaptation Plan for Natural Disasters

#### Introduction:

Maharashtra state is vulnerable to extreme weather events like floods, droughts, cyclone. 12 per cent of land is prone to floods and river erosion; Maharashtra state has about 720 km long indented coastline, is prone to cyclones and tsunamis; 68 per cent of the cultivable area is vulnerable to drought and hilly areas are at risk from landslides and avalanches. Heightened vulnerabilities to disaster risks can be related to expanding population, urbanization and industrialization, development within high-risk zones, environmental degradation and climate change to ensuring clarity about roles and responsibilities of the State, District and local authorities.

Disasters disrupt progress and destroy the hard-earned fruits of painstaking developmental efforts in quest for progress. Maharashtra State has a profile of varied hazards and was first in India to start a Disaster Management Unit (DMU) after the Latur earthquake. Since 1993, Disaster Management (DM) in Maharashtra is fast evolving from a reactive response oriented to proactive strategy-based system. The state has witnessed the devastating disasters like Latur Earthquake in 1993, Mumbai Flood in 2005 and Cyclone Phyan in 2007.

#### Themes underpinning the Plan:

- Vulnerability assessment of various disasters in the State
- Measures to be taken for prevention, mitigation, preparedness and response of disasters
- Steps that to be adopted for main streaming disaster in development plans/programmes/projects
- Importance of addressing capacity building and preparedness measures
- Clear delivery of role and responsibilities of each department of the government and of stakeholders

#### Following hotspot districts are identified each event:

- Drought: Sangli, Ahmadnagar, Solapur, Dhule, Buldhana, Hingoli, Jalgaon, Osmanabad, Nandurbar, Nagpur, Satara, Akola, Nanded, Aurangabad, Pune, Amravati, Nashik, Jalna, Garchiroli, Raigad, Chandrapur, Gondia, Wardha, Yavatmal.

- Flood: Mumbai, Jalgaon, Aurangabad, Pune, Nagpur, Amravati, Nashik, Ratnagiri, Wardha, Thane.
- Cyclone: Mumbai, Ratnagiri, Thane.

## Health Adaptation Plan for Natural Disaster

### IEC dissemination plan for natural disasters under NPCCHH

IEC type	Material	Timeline	Mechanism
<b>Advisory</b>	<a href="http://bit.ly/NPCCHHPrg">bit.ly/NPCCHHPrg</a>	Seasonal	By email to DNO for further dissemination to health facilities
<b>Early warning</b>	Bulletins/ advisory by IMD (storm, cyclone), CWC (flood) sent by NPCCHH	Seasonal	<ul style="list-style-type: none"> <li>Health department/other government website/application</li> <li>Digital display of temperatures on public places and health facilities</li> </ul>
<b>Posters</b>	<ul style="list-style-type: none"> <li>6 posters on various EWE and health impacts (English, Marathi)</li> </ul> <a href="http://bit.ly/NPCCHHIEC">bit.ly/NPCCHHIEC</a> <ul style="list-style-type: none"> <li>Posters on heat and health impacts</li> </ul>	Seasonal, As needed	<ul style="list-style-type: none"> <li>Printing of copies for state-level dissemination at health facilities, public places/buildings</li> <li>By email to DNO for printing at district level and dissemination to health facilities, schools and other public/government buildings</li> </ul>
<b>Hoardings</b>	<ul style="list-style-type: none"> <li>Posters in Marathi (above)</li> </ul>	Seasonal, As needed	<ul style="list-style-type: none"> <li>To be planned in High priority districts</li> </ul>
<b>Audio-Visual</b>	<ul style="list-style-type: none"> <li>Audio Jingle</li> <li>5 Video messages (Marathi, English)</li> </ul> <a href="http://bit.ly/NPCCHHIEC">bit.ly/NPCCHHIEC</a> <ul style="list-style-type: none"> <li>Video message</li> </ul>	Seasonal, As needed	<ul style="list-style-type: none"> <li>Played seasonally and around relevant extreme weather events</li> </ul>
<b>Digital display</b>	<ul style="list-style-type: none"> <li>5GIF</li> <li>Above mentioned video messages</li> </ul>	Seasonal, As needed	<ul style="list-style-type: none"> <li>Display in health facilities</li> <li>Public digital display boards in major cities</li> </ul>

<b>Social medial</b>	All above material + Relevant activity updates	Seasonal, As needed	<ul style="list-style-type: none"> <li>Facebook and Twitter handle of state NPCCHH, NHM</li> <li>WhatsApp groups (State DNO, Health facility group)</li> </ul>
--------------------------	---	---------------------------	--

### Strengthening Health Sector Preparedness

- **Early warning:-** Dissemination of early warnings for Coldwave, Flood, Cyclone etc to health facility **level** and community level
- **Surveillance**
  - Post-disaster health impact assessment
  - Support post-disaster surveillance of communicable disease, health facility affected conducted by SDMA, IDSP or other agencies

### Health Facility Preparedness

- Vulnerability assessment of health facility in context of climate change-extreme weather events
- Identify structural changes/retrofitting measures at the facility level to equip the healthcare facility
- Formalize disaster management plan and committee
- Emergency procurement arrangements & functioning of essential health services (safe water, immunization, maternal-child care etc)
- Post-disaster damage assessment and referral plan in case of health facility damage
- Ensure routine monitoring and maintenance of support functions (Water quality, waste management)
- Establish Sustainable procurement committee

## Capacity Building

### Training Calendar

Type of Training	Participants	Content of Training	Timeline
<b>State Level ToT</b>	State Level officers, Regional level officers, District level officers	Preparedness Preventive Measures of disasters	December
<b>District Level Training</b>	District level supervisors, THO	Preparedness Preventive Measures and of disasters	January
<b>Medical Officer Training</b>	Medical officers	Preparedness Preventive Measures and of disasters	Jan- Feb
<b>Paramedical staff training</b>	MPW, ANM, LHV, etc	Surveillanceand Preventive measures, quick response teams	March
<b>Panchayat Raj Institute training</b>	PRI members	Awareness generation,	March

### Budget

<b>2022-23</b>	<b>All district</b>	<b>December-January</b>	<b>Preparedness and</b>	<b>12 lakh</b>
<b>2023-24</b>		January-March		12 lakh
<b>2024-25</b>		January-March		15 Lakh
<b>2025-26</b>		January-March		15 lakh

2026-27		January-March	<b>Capacity Building workshops</b>	18 Lakh
---------	--	---------------	------------------------------------	---------

### Roles and Responsibilities

Responsibilities	
<b>SNO</b>	<ul style="list-style-type: none"> <li>Disseminate early warnings to district level</li> <li>Finalization of IEC material and dissemination Plan</li> <li>Formalize intersectoral coordination for disaster planning, management and response with SDMA/IMD and other response departments</li> <li>Organize training of district level officers</li> <li>Facilitate assessment and implement of climate resilient measures in health facilities</li> <li>Review implementation of IEC, training and surveillance activities at all levels</li> <li>Evaluate and update relevant section of SAPCCHH with support from State Task Force</li> <li>Create organizational support and strengthen Environmental Health cell to implement NPCCHH vision, Goal and Objectives</li> <li>Organize sensitization workshops for other stakeholders and line departments</li> <li>Collaborate with academic institute/s for support in updating SAPCCHH, Surveillance activity monitoring, training of health care professionals, vulnerability assessment and applied research</li> <li>Submit reports of activities on EWE and health under NPCCHH</li> </ul>
<b>DNO</b>	<ul style="list-style-type: none"> <li>Disseminate early warning to block and health facility level</li> <li>Ensure IEC dissemination to community level and facilitate community level IEC activities</li> <li>Organize training for block health officers and MO</li> <li>Formalize intersectoral coordination for disaster planning, management and response with SDMA/IMD and other response</li> </ul>

	<p>departments</p> <ul style="list-style-type: none"> <li>• Liaison with other departments for combined IEC campaigns, coordinated response and information sharing of health indicators for targeted action</li> <li>• Identification and communication of Evacuation routes &amp; relief camps</li> <li>• Support planning and management of health care services in relief camps</li> <li>• Provide necessary IEC on health and sanitation in relief camps</li> <li>• training for block health officers, medical officers, with relevant training manuals</li> <li>• Conduct sensitization of vulnerable groups: police officers, outdoor works, women, children etc.</li> <li>• Organize IEC campaigns at district level on observance of important environment-health days</li> <li>• Facilitate disaster vulnerability assessments in health facilities and maintain records of such assessment and health facility damage due to EWE</li> <li>• Update DAPCCHH with support from District Task Force</li> <li>• Submit reports of activities on EWE and health under NPCCHH</li> </ul>
<b>Block health officer</b>	<ul style="list-style-type: none"> <li>• Conduct community level IEC activities</li> <li>• Ensure training of medical officers</li> <li>• Organize PRI sensitization workshop and training for vulnerable groups</li> <li>• Facilitate disaster vulnerability assessments in health facilities and maintain records of such assessment and health facility damage due to EWE</li> </ul>
<b>Medical officer</b>	<ul style="list-style-type: none"> <li>• Conduct health facility-based IEC activities</li> <li>• Support community level IEC activities</li> <li>• Preparation of Disaster Management Plans and hospital safety plan</li> <li>• Assessment of health facility in context of climate change-extreme weather events</li> </ul>

	<ul style="list-style-type: none"> <li>Identifying structural changes/retrofitting measures at the facility level to equip the healthcare facility</li> <li>Ensuring routine monitoring and maintenance of support functions (Water quality, waste management)</li> <li>Health facility preparedness for seasonal events</li> </ul>
<b>Panchayati Raj Institutions</b>	<ul style="list-style-type: none"> <li>Conduct community level IEC activities</li> <li>Community involvement in planning and demonstration of measure taken before-during-after an EWE</li> </ul>

### Observance of important environment-health days

Day	Activities on Heat-Health
<ul style="list-style-type: none"> <li><b>International Day for Disaster Risk Reduction</b></li> </ul>	<p>IEC Campaigns</p> <ul style="list-style-type: none"> <li>Audio-video spots broadcasting</li> <li>Targeted awareness sessions: women, children, occupational groups</li> <li>Mock drill, disaster response exercise</li> <li>Sports events</li> <li>Competition: poster, poem/essay, quiz</li> </ul> <p>Health facility level activities</p> <ul style="list-style-type: none"> <li>Health facility-based patient awareness sessions</li> <li>Conduct assessment of disaster vulnerability/energy/water conservation measures</li> <li>Review of implementation of climate-resilient measures</li> </ul>

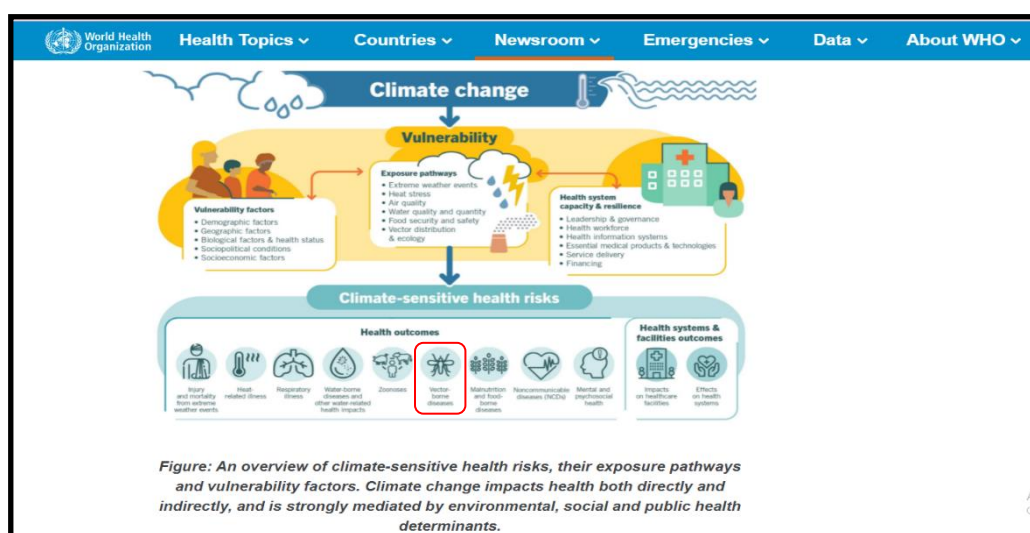

## Chapter 9

### Health Adaptation plan for Vector Borne diseases

#### Introduction: Vector Borne diseases

Effect of variation in climate has been well established for illnesses which are spread through vectors or which are transmitted from animals to humans. According to World Health Organization (WHO) climate change is considered as one of the paramount threat to human health. The cumulative rate of global warming over recent decades has been recorded over the past millennium [1].

Direct impact of climate changes on human health has been observed to be long-term changes in rainfall and temperature, climatic extremes (heat-waves, hurricanes, and flash floods), air quality, sea-level rise in lowland coastal regions, and multifaceted influences on food production systems and water resources [2]. Infectious diseases of humans and animals are playing a significant role in consequences of climate change. The negative impact of infectious diseases on health and well-being is intrinsically linked to a combination of multiple stressors or drivers such as poor sanitation, access to clean water and food, the quality of public health services, political instability and conflict, drug resistance, and animal and/or human population movements [3].

Reference [4]: <https://www.who.int/news-room/fact-sheets/detail/climate-change-and-health>

The major vector for an infectious Vector Borne Diseases (VBDs) transmission is arthropods. These vectors are mostly ectothermic and highly sensitive to changes in climate

especially temperature changes as internal temperature regulated by external environmental conditions. Their larval development stage generally requires the presence of humid conditions or availability of water bodies. Hence the sudden increase in the vector borne disease cases can be observed in rainy season. However adult arthropod serving as a vector in VBDs tends to have an increased biting rate with increase in temperature until temperature reaches up to an upper threshold, after which they decrease. [5] Apart from vector biting rate, the extrinsic incubation period or EIP also seemed to be accelerate, resulting into fast development and replication of pathogens transmitted within vectors at high temperatures. [6]. Furthermore, vector development and survival is significantly affected by temperature conditions [7].

The entomological parameters affected by rainfall and temperature can be summarized using the maximum daily reproductive rate of the disease: the vectorial capacity [8]. The optimal temperature range for disease transmission varies depending upon the vector–pathogen combination being studied; however, vectorial capacities of the most harmful tropical VBDs consistently peak at relatively high temperatures [9].

The evidence suggests that future climate change, if not mitigated, will very likely impact the length of the transmission season and the geographical range of a significant proportion of infectious diseases. [10]

Image Ref: [11]

Climate change can have an effect on the geographic spread, transmission dynamics, and re-emergence of vector-borne diseases through multiple pathways. The effects of climate change can be seen on the pathogen, the vector, non-human hosts and humans.

Apart from these effects, climate change can alter complete ecosystem comprising multiple habitats including urban habitats, in which vectors or non-human hosts may flourish or fail.

As arthropods and other vectors are ectotherms, increase in the temperature is directly proportional to vector abundance, survival and feeding activity and the rate of development of the pathogen within the vector [11].

The major global vector-borne diseases identified by World Health Organization and are observed in India are malaria, dengue, chikungunya, Zika virus disease, Lymphatic Filariasis, Leishmaniasis and Japanese Encephalitis (J.E.). However, in Maharashtra, Malaria, Dengue, Chikungunya, Lymphatic Filariasis and J.E. these diseases are major vector borne diseases. Malaria, J.E. and Lymphatic Filariasis are observed in specific regions of Maharashtra whereas Dengue is observed throughout the state.

Malaria, Dengue, Chikungunya information for the year 2020							
	Malaria			Dengue		Chikungunya	
	Positive cases	PF	Deaths	Positive Cases	Deaths	Positive Cases	Deaths
Corporation	5576	273	0	1639	4	297	0
Total							
District Total	7333	6302	12	1717	6	485	0
State Total	12909	6575	12	3356	10	782	0

#### Causes of different Vector Borne diseases in the state:

- i. Intermittent rains
- ii. Traditional water storage practices
- iii. Climatic condition variations

### Factors contributing to increase of respective vector-borne diseases in the Maharashtra state-

- i. Increase in Vector density
- ii. Increase in breeding sites
- iii. Asymptomatic transmission

### Priority Districts for Vector Borne diseases (according to Prevalence in the past years)

#### Vulnerability assessment:

Weather variables: Temperature, rainfall, humidity, floods, drought, wind, daylight duration etc., Change in Vector / animal population due to change in growth, survival, feeding habits, seasonality, breeding sites, resistance etc., Change in interaction of vector/ animal & pathogen due to change in susceptibility, Incubation period, or transmission, Change in demography, migration, land-usage practices, water projects, agricultural practices and Public health infrastructure and access to it.

#### District wise Morbidity, Mortality and related statistics of Vector Borne diseases

District	Malaria		Dengue		Chikungunya

3	Palghar	Vasai, Palghar

**Health Adaptation plan for Vector Borne diseases**

## Awareness Generation

The state environmental health cell is closely working with state National Vector Borne Disease Control Programme (NVBDCP) division. The IEC activities for vector borne disease are jointly done by NVBDCP division and EHC -

- a. Advertisement and promotion through IEC:
  - i. Person to person communication method by ASHAs, MPWs and Insect collectors.
  - ii. Messages to community through cultural programs and Street plays during Ganesh festival, Navaratri, etc
  - iii. Pamphlets, Radio jingles, Hoards, billboards, as and other advertisement modes
- b. Medical professional training:
  - i. Expanded training of doctors and associate staff
  - ii. Increased training of NGOs and Asha workers
- c. Carry out mass media campaigns
- d. Promote a culture of risk prevention, mitigation, and better risk management
- e. Promote attitude and behaviour change in the awareness campaigns linking air pollution and climate change.
- f. Engage local and regional media (community radio, TV)

### Observance of important environment-health days

Observance of following days may be recommended for awareness on climate change and vector-borne diseases.

Day	Activities on VBD in context of climate change
<ul style="list-style-type: none"> <li>• <b>World malaria day (April 25)</b></li> <li>• <b>World mosquito day (August 20)</b></li> <li>• <b>World Environmental Health Day (September 26)</b></li> </ul>	<p>IEC Campaigns</p> <ul style="list-style-type: none"> <li>• Targeted awareness sessions: urban slums, schools, women, children</li> <li>• Street plays and local cultural activities, Rallies</li> <li>• Clinical management training for Dengue</li> <li>• Dengue awareness week</li> </ul>

### Capacity Building

The state has regularly conducting training for district level officers, medical officers and paramedical staff for surveillance and clinical management

## Training plan

Training Programme for	Trainer	Topics	Timeline
District level (DNO-CC, trainers)	State Level Trainers SNO-CC, Consultant	<ul style="list-style-type: none"> <li>- Role of climate change impact in VBD burden, prevention measures</li> <li>- Tracking of VBD and Integrating rainfall, humidity and temperature parameters with VBD surveillance</li> <li>- Post-disaster VBD surveillance, prevention, management</li> </ul>	June-July
Health facility level (MO of DH/RH/PHC)	District Level Trainers DNO-CC	<ul style="list-style-type: none"> <li>- Role of climate change impact in VBD burden, prevention measures</li> <li>- Strengthen surveillance reporting</li> <li>- Post-disaster VBD surveillance, prevention, management in community and at relief camps</li> </ul>	July-August or after extreme weather events/natural disasters
Community Health care workers (MPH, ASHA, ANM etc)	District Level Trainers, MO	<ul style="list-style-type: none"> <li>- Role of climate change impact in VBD burden, prevention measures</li> <li>- Post-disaster VBD surveillance, prevention, management in community and at relief camps</li> </ul>	
Panchayati Raj Institutions	District level trainers, MO, Health care workers	<ul style="list-style-type: none"> <li>- Role of climate change impact in VBD burden, prevention measures</li> </ul>	

## Strengthening Health Sector Preparedness

- Integrate weather parameters with VBD surveillance under NVBDC at District level
- Surveillance training: included under capacity building section
- VBD prevention and control measures

- Planning of indoor residual spray a month before peak of malaria cases based on historical data
- Management of new foci of transmission in endemic areas.
- Epidemic preparedness especially after extreme weather events or natural disasters

#### **Roles and responsibilities (Govt & non- Govt)**

NVBDCP, Maharashtra	Overall guidance and policy formulation	<ul style="list-style-type: none"> <li>• Guide and the state governments in resurgence and containment of any VBD</li> </ul>
State Nodal Officer, Climate Change	To support the state govt. in control of VBDs particularly in climate sensitive states	<ul style="list-style-type: none"> <li>• Oversee vector control measures</li> <li>• Oversee health sector preparedness</li> <li>• Oversee VBD surveillance, control in post-disaster situations in community and relief camps</li> <li>• Train DNO, DMO</li> <li>• Sensitization workshops to increase awareness on climate change and its impact on VBD</li> </ul>
India Meteorological Department	To provide meteorological data as and when required	<ul style="list-style-type: none"> <li>• To help the state govt. in collaboration with any research institute, in analysis of relationship between climatic factors and a particular VBD so as to forewarn the impending outbreaks.</li> </ul>
NGO at state and district level for reach to community	Health education at community level	<ul style="list-style-type: none"> <li>• Conduct workshops for IEC activities for different level of staff in the identified areas in consultation with the state govts</li> </ul>
State Programme Officer	Overall planning and execution of surveillance and intervention measures to control VBDs	<ul style="list-style-type: none"> <li>• Supervise and guide the DMOs in control of VBDs</li> </ul>
State Entomologist	To provide guidance in vector control.	<ul style="list-style-type: none"> <li>• Generate data on fortnightly fluctuations in density of vector species so as to guide the state government in choosing appropriate time of</li> </ul>

		IRS activities. To generate data on susceptibility status of disease vectors for using appropriate insecticide for IRS/larvicide for vector control
Chief Medical Officer/District Malaria Officer/Disease Surveillance officer	Execution of task assigned by the SPO	<ul style="list-style-type: none"> <li>Supervise and guide surveillance and intervention measures for control of VBDs in the district.</li> </ul>
Media	To be vigilant for report of any upsurge/outbreak of any VBD.	<ul style="list-style-type: none"> <li>Impart health education to masses through print and audiovisuals means</li> </ul>

## Surveillance

### Mechanism of Generation of Alert system for the outbreak of Vector Borne diseases.

- State has developed daily reporting system for outbreaks
- District level Rapid Response teams are formed for prompt action.
- At state, staff from communicable disease sections, National vector Borne Diseases control and prevention (NVBDCP) and Integrated Disease Surveillance program (IDSP) all together formed a common section for Communicable diseases to strengthen Alert generation system for the outbreak through IHIP.
- Every member of this team shares news regarding vector borne diseases published in the various newspapers.
- State has also encouraged health department staff to generate an outbreak event on IHIP system

# Health Adaptation Plan for Green and Climate Resilient Infrastructure

### Introduction:

The aim of building climate resilient and environmentally sustainable health care facilities is: (a) to enhance their capacity to protect and improve the health of their target communities in an unstable and changing climate; and (b) to empower them to optimize the use of resources and minimize the release of pollutants and waste into the environment. Such health care facilities contribute to high quality of care and accessibility of services and, by helping reduce facility costs, also ensure better affordability.

As the climate continues to change risks to health systems and facilities—including hospitals, clinics and community care centers—are increasing, reducing the ability of health professionals to protect people from a range of climate hazards. Health care facilities are the first and last line of defense to climate change impacts. They can be responsible for large emissions of greenhouse gases (GHGs), but also, they provide the needed services and care to people harmed by extreme weather and other climate hazards. Health care facilities can also produce large amounts of environmental waste and contamination (GHGs and other contaminants) which may be infectious, toxic or radioactive and therefore a threat to the health of individuals and communities. Health care facilities provide health treatments and related procedures to patients and vary in size from small health care clinics to very large hospitals. In many countries, they often lack functioning infrastructure, an informed and trained health workforce to address environmental challenges, and are subject to inadequate energy supplies, water, sanitation and waste management services. Improving these is a priority and is key to building resilience and contributing to environmental sustainability.

### Understanding Climate Resilience and Environmental Sustainability of healthcare facilities:

There are several definitions that support our understanding of these subjects. Health systems include an ensemble of all public and private organizations, institutions and resources mandated to improve, maintain or restore health as well as incorporate disease prevention, health promotion and efforts to influence other sectors to address health

concerns in their policies. Health system resilience is the capacity of health actors, institutions and populations to prepare for and effectively respond to crises; maintain core functions when a crisis hits; as well as stay informed through lessons learned during the crisis and reorganize if conditions require it. It is the ability to absorb disturbance, to adapt and to respond with the provision of needed services.

Climate resilient Health care facilities are those able to anticipate, respond to, cope with, recover from and adapt to climate-related shocks and stress, so as to bring ongoing and sustained health care to their target populations, despite an unstable climate. Figure 1 illustrates the important dynamics affecting the climate resilience of Health care facilities. Building on the concept of risk as a function of hazards, vulnerabilities and exposures (illustrated in the figure as a triangle, as defined by the Intergovernmental Panel on Climate Change (IPCC)), it depicts how hazards, in the form of a sudden event (a shock, such as a storm or sudden flood), or a slow-onset event (a stress, such as a drought, sea-level rise or high volume of cases of a climate-related disease), will reduce the Health care facilities level of performance and capacity (left axis). This would occur through a combination of impacts on key facility elements (for example, increasing—or adding to—the vulnerability of the health workforce, its infrastructure, its water, sanitation and energy systems), and therefore increasing risks. The level of resilience (right axis) indicates whether the facility will recover its pre-event state, recover but to a state worse than before (or even collapse and not recover) or recover and attain a level of resilience greater than before the event. The figure also highlights the risk management steps for prevention, preparedness, response and recovery.

Figure 1. Climate resilience in health care facilities. Sources: [6–9].

### Strengthening Climate Resilience and Environmental Sustainability:

Making HCFs climate resilient and environmentally sustainable would contribute to achieving SDGs related to climate change, sustainable consumption, water and sanitation, energy, employment, resilient infrastructure and health and well-being.

The National Programme on Climate Change and Human Health (NPCCHH) is engaging critically with strengthening the healthcare services and facilities to adapt to as well as mitigate the impacts of climate change. The key components recognized under the programme include –

1. Environmentally Sustainable (Green) Measures at Health Care Facilities
  - a. Energy Auditing
  - b. Installation of LED lighting at Health Care Facilities
  - c. Installation of Solar panels
  - d. Water Conservation Measures – Rain water Harvesting
2. Climate Resilient Infrastructure at Health Care Facilities including Retro Fitting of Existing Health Care Facilities

#### 1. Environmentally Sustainable (Green) Measures at Health Care Facilities

##### a. Energy Auditing:

An energy audit identifies all energy end-users within the building, estimates how much energy is used in each department, and determines the amount of energy used in relation to the desired values.

The guiding principles in this respect include:

- The HCFs would develop a plan for the energy audit to assess the level of energy consumption.

- The responsibility for the energy audit would be of the IPC committee of the facility. If the healthcare facility lacks qualified staff, then the energy audit would be conducted by the state health department as well.
  - The energy audit would also consider load management, poor maintenance aspects, and extreme temperature to avoid fire-related accidents. Audit would be conducted in the facility biannually.
  - Installing sub-meters in the facility premises would be useful in understanding how much energy is used across the healthcare facility
- b. Replacing the existing non-LED lights with LEDs:** Replacing the incandescent bulbs with LEDs leads to 75% less energy consumption. Each LED light saves approximately INR 700-1400 over the course of a year.
- The guiding principle in this respect would be:
- Healthcare facilities would have a policy on purchasing and using energy- efficient equipment and devices. The facilities would gradually phase out the incandescent bulbs with LEDs.
- c. Installation of Solar panels:** Healthcare facilities both in urban and rural areas consume a lot of energy throughout the day as the electrical equipment used directly or indirectly to treat patients requires uninterrupted power.
- The guiding principle in this area would be:
- The state would, in a phased manner, install PV solar panels in unused spaces like the roof of the facility. This would reduce grid-based electricity consumption and decrease the peak demand of a facility, which means the organization has lower operating costs, and hence these saved costs can be utilized for better patient care.
- d. Water conservation:** In an HCF, sanitary fixtures consume 42 per cent of water while heating ventilation and air conditioning (HVAC) consumes 23 per cent of water, thus, major water-consuming area needs to be focused on reducing water consumption.
- Rainwater harvesting for healthcare facilities has the potential to save thousands of liters of water every year. This in turn can result in substantial cost savings in addition to adopting climate-smart practices.

The guiding principles for water conservation in a HCF would be as follows:

- The healthcare facility would develop a strategy for the optimum usage of water.
- The HCFs would develop a plan for the conservation of water. e.g., water-efficient fixtures, dual flush mechanism, sensor operated urinals, waterless urinals, rainwater harvesting
- The HCFs would have a plan for the wastewater treatment. e.g., sewage treatment plant and effluent treatment plant at sites of generation of contaminated grey water, like pathology.
- The HCFs would develop a programme/plan for the conservation of water
- The HCFs would have a water management programme for the conservation of water by establishing a team, setting goals with timelines, conducting water audits, determining the cost of water and preparing an action plan

- The HCFs would have an ongoing educational programme for the efficient usage and conservation of water for all the stakeholders (staff, patient and visitors)
- The HCFs would have a plan to train the staff on water savings techniques
- The HCFs would develop a wide variety of methods to communicate through IEC materials, new and/or revised operating guides and manuals

### **Climate Resilient Infrastructure at Health Care Facilities including Retro Fitting of Existing Health Care Facilities**

It is essential that HCF planning and designing should be responsive to local climate and hazard profile of the district. Strong focus should be given to designing all aspects of infrastructure and services as per relevant IS standards, building codes and local byelaws, and history of emergencies in the district to ensure patient safety and continuity of health service during emergencies. Few key interventions that would be undertaken to make the HCFs into green buildings would include:

#### **New Buildings**

- Climate risk assessment at the time of planning and designing the building.
- Use of high-performance glass on windows, doors, and roofs to prevent the heat inside and allows sunlight and fresh air to enter the room.
- Use double glazing glass on windows; it provides thermal and optical properties to the building and reduce the noise level.
- Insulation of building from inside and outside in colder regions of the country.
- Ensure the plinth level is above the high flood level as known locally or storm surge level ( in costal districts) and make the building accessible with ramps and railing to create a barrier free environment.
- Installation of Rainwater Harvesting System
- Installation of alternative energy systems
- Installation of STP & ETP

#### **Existing Infrastructure**

- Introduction of electronic patient records in the facility to reduce the use of paper.
- Availability of 10-30 per cent area for the herbal garden in the facility.
- Floor and wall finishes are conducive for infection prevention control practices.
- Modifications in the critical care rooms to make them functional during disasters.
- Installation of Rainwater Harvesting System
- Installation of alternative energy systems
- Installation of STP & ETP

**Table 2.** Sample interventions.

	Objectives	Climate Resilience	Environmental Sustainability
Health workforce	Human resources	Identify minimum needs in terms of health care workers to ensure the operational sufficiency of every HCF department, in case of climate-related disaster or emergency	Increase human resources available to reduce or eliminate disease burden among vulnerable populations resulting from environmental hazards in HCFs
	Capacity development	Health workforce receives training and exercises for preparing for, responding to and recovering from extreme weather-related emergencies	Education and training provided to HCF staff and the community on environmental factors that contribute to the burden of disease
	Communication and awareness raising	Key messages for target audiences (such as patients, staff, public) drafted in preparation for the most likely extreme weather disaster scenarios	Increase knowledge and communication about the environmental impact of pharmaceuticals and their disposal
Water, sanitation and health care wastes	Monitoring and assessment	Develop climate resilient water safety plans	Implement and monitor a waste reduction program including waste management training for all staff
	Risk management	WASH climate risk management plan implemented	Wastewater is safely managed through use of on-site treatment or sent to a functioning sewer system
	Health and safety regulation	Sanitation technologies designed to be more resistant to climate hazards and able to operate under a range of climate conditions	Harvested rainwater or gray water is safely used to flush toilets, clean outdoor pavement areas and water plants when possible

**Table 2. Cont.**

	Objectives	Climate Resilience	Environmental Sustainability
Energy	Monitoring and assessment	Assess that location of energy backup or renewable energy infrastructure can withstand extreme weather events (such as strong winds, hail, floods)	Assess the HCF to determine how and where energy use can be reduced (or increased in energy poor areas)
	Risk management	Plan developed for managing intermittent energy supplies or system failure	HCF fossil fuel consumption reduced by use of renewable energy sources, including solar (photovoltaic) power, wind power, hydro power and biofuels
	Health and safety regulation	Adequate lighting, communications, refrigeration and sterilization equipment are available during climate-related disasters or emergencies	Developed an energy management plan to measure energy consumption
Infrastructure, technology, Products	Adaptation of current systems and infrastructures	HCFs built or retrofitted to cope with extreme weather events, ensuring their resilience, safety and continuous operation	New (or retrofitted) HCFs designed and constructed based on low-carbon approaches
	Promotion of new systems and technologies	HCF uses proven smart materials and applications, sensors, low-power electronics, telemedicine and similar health care-appropriate technology	Substitute mercury-containing thermometers and blood pressure-measuring devices for affordable, validated device alternatives
	Sustainability of HCF operations	Anticipate the impact of the most likely disaster events on the supply of water, food and energy	Implement a clear environmentally sustainable procurement policy statement or protocol for all types of products, equipment and medical devices used in the HCF

## Capacity Building:

Health workers have a key role in building climate resilience and environmental sustainability

of HCFs. Health care workers are the main actors in ensuring that interventions are effective for their own roles and activities, as well as for other components of the framework. Because building climate resilience and environmental sustainability are relatively new approaches for health workers, building awareness, training and empowering health workers are key requirements for the successful implementation of interventions.

### Annual training plan for Climate resilience Hospitals, Maharashtra.

Training Programme for	Trainer	Topics	Timeline
<b>District level (DNO-CC, trainers)</b>	State Level Trainers SNO-CC, Consultant	<ul style="list-style-type: none"> <li>• Role <i>Training on green and climate-resilient health care facilities</i> in terms of climate impact</li> <li>• Assessments required for implementation</li> <li>• Coordination with supporting agencies</li> </ul>	September

## Annexure II

### Role of different Ministries in control of Air Pollution

#### Ministry of Health & Family Welfare

- Develop/ adapt health micro-plan for Respiratory diseases (case management, resources required like logistics, drugs, vaccines, and laboratories' role).
- Map vulnerabilities: population at risk, geo-climatic conditions, seasonal variation, exposure to pollens or allergens by change in types of crops or flower plants, change in population demography, migration (in & out), available resources, healthcare infrastructure, laboratories, burden of chronic illnesses in the community
- Strengthen/ Initiate Sentinel surveillance, real-time surveillance, evaluation and monitoring system for respiratory and cardio-vascular illnesses, hospital admission as well as Enhance vaccination programs and 'Vaccination Campaign' for vaccine-preventable air borne and respiratory diseases.
- Develop or translate IEC in local language, and make a communication plan for dissemination of health-related alerts/ education materials.
- Capacity building and increasing awareness for individuals, communities, health care workers through involvement of various media as well as campaigns and training workshops.
- Ensure adequate logistic support, including equipments and other treatment modalities and supplies for case management at all levels of health care and also under 'Emergency response Plan' in case of any disaster where air borne illnesses may occur as an outbreak
- Inter-sectoral and stakeholders' coordination to monitor health outcomes with early warning system related to extreme weather events/ Air Quality Index/ ground level Ozone etc.

#### Ministry of Environment, Forests and Climate Change

- Ensure that State Pollution Control bodies set standards for industry-specific emission and effluent, monitor levels of pollutants and enforce penalties.
- Enforce strict air quality standards for pollution
- Strict implementation of Environment Impact Assessments (EIA) to minimize the adverse impact of industrial activities on the environment
- Effective implementation of 'National Green Tribunal' directives on trash burning/ waste disposal from different sources
- Take strict measures for unregulated sectors (such as brick kilns, trash burning, stone crushing) which contributes to ambient air pollution

### **Ministry of Human Resource Development**

- Regular screening of school children for early detection of diseases, this can be attributed to the existing air pollution
- Inclusion of harmful health effects of environmental pollution (AAP and HAP) in the school curriculum (state board), including current policies and mitigation practices that are designed to reduce air pollution
- Improve indoor air quality of educational institutions statewide
- Improve walkability and access to educational institutions by non-motorised transport, thus minimizing the air pollution in the school surroundings
- Sensitize students and teachers on using the Air Quality Index in planning outdoor school activities

### **Ministry of Agriculture**

- Policy in place to promote multiple uses of crop residues and prevent their on-farm burning.

### **Ministry of Rural Development**

- Include health promotion (like clean air) guidelines as part of “Nirmal Gram Puraskar”/ Model Villages evaluation criteria/ create alternate awards with specific criteria based on air pollution at the state level.
- Under integrated rural development, develop and implement micro level planning policies/schemes with Panchayati Raj Institutions to address the social determinants of health for reducing the hazards of air pollution (lack of education, unemployment, poverty, poor housing conditions, etc.)

### **Ministry of Urban Development**

- Formulate/revise urban transport policy which reduces vehicular pollution
- Implement policies to reduce indoor air pollution (like disincentivizing diesel gensets and promoting clean cooking fuels thus ‘making available clean and making clean available’)
- Enforcement of ban on burning garbage or biomass (especially during winter months)
- Help cities develop air pollution alerts and emergency plans based on the Air Quality Index or CPCB continuous air monitoring data

### **Ministry of New & Renewable Energy**

- Implement policies for truly clean cookstoves and support research and development.
- Research and development of other non-conventional/renewable sources of energy and programmes relating thereto, including locally generated power to supply cooking appliances;
- Support and strengthen Integrated Rural Energy Programme (IREP) with emphasis on indoor air pollution
- Create a consensus action plan for replacing biomass fuels with alternative clean fuels

### **Ministry of Petroleum & Natural Gas**

- Expand new initiatives to increase the availability of LPG and other cleaner fuels to the rural & tribal areas
- Expand the piped natural gas network to reach out to a larger population

#### **Ministry of Power**

- Promote/develop more efficient cooking devices
- Evaluate the potential for electric cooking appliances to substitute for biomass and LPG

#### **Ministry of Road Transport and Highways**

- Ensure effective implementation of New Motor Vehicles Act, once approved
- Ensure proper engine checks for vehicles to assess pollution levels

#### **Ministry of Information and Broadcasting**

- Develop hard hitting, high impact and cost effective media plans, strategies and conduct activities for awareness generation on harmful effects of air pollution and options for their mitigation.
- Ensure enforcement of relevant provisions in the Cable Television Networks Act to regulate advertisements of tobacco etc.
- Involvement of Songs & Drama division; Department of Field Publicity to promote health promotion activity for air pollution and its impact on respiratory and NCD risk factors
- Develop policies to ensure that media houses allocate free airtime for health promotion messages as a corporate social responsibility activity

#### **Ministry of Communications & Information Technology**

- Use of mobile phones to encourage healthy choices and warn people about air pollution (both AAP and HAP, using Air Quality Index)
- Establish Telemedicine linkages between different levels of health care in the state

#### **Ministry of Labour and Employment**

- Regular health check- ups for early screening of pollution related diseases.
- Frame guidelines and conduct workshops for health promoting workplaces, (guidelines on indoor air quality),
- Showcase and support companies which employ workplace policies that can reduce vehicular travel such as telecommuting, or placing the workplace in sites that are accessible through public transportation (eg. Metro) or non-motorised transport.

#### **Ministry of Women and Child Development**

- Advocate through Self Help Groups and Mahila Mandals for protection of women and children from significant exposure to smoke from biomass while inside the house.
- Awareness raising can be done to improve household ventilation to reduce smoke inhalation from lighting (ex. kerosene) or cooking fuel

## Ministry of Finance

- Analysis of the economic and financial implications of the health and other impacts of air pollution in the state

## Ministry of Law and Justice

- Support enforcement on bans of burning trash for heating or as a way of disposal

## Air Pollution IEC activities in Maharashtra

**वायु प्रदूषणापासून स्वतःच्या आरोग्याचे संरक्षण करण्यासाठी लगेच कृती करा!**

काय करावे	काय करू नये
घरात राहावे	फटाके, कचरा इत्यादी जाळू नका
शवास घेण्यास त्रास, छातीत अस्वस्थता किंवा डोळ्यांची जळजळ होत असल्यास लगेच डॉक्टरांना भेटा	सकाळी लवकर आणि संध्याकाळी घराची दारे-खिडक्या उघडणे टाळा
शवासनाचे, फुफ्फुसाचे आणि हृदयाचे आजार असलेल्या व्यक्तीसाठी योग्य औषधे जवळ ठेवा	सकाळी आणि संध्याकाळी घराबाहेर फिरायला जाणे टाळा
स्वयंपाकासाठी धूर येणार नाही अशी झेदने वापरा	गर्दीच्या आणि ट्रॅफिकच्या जागी जाणे टाळा
	धूम्रपान टाळा

**वायुप्रदूषण: आपल्या आरोग्याचे संरक्षण करण्यासाठी कृती करा!**

**प्रदूषणाचा आपल्यावर वाईट परिणाम होतो एयर क्वालिटी इंडेक्स पातळी तपासा**

एयर क्वालिटी इंडेक्स पातळी	आरोग्यावर होऊ शकणारे परिणाम	आयुष्य वागणुकीसाठी	नोखरीच्या लोकांसाठी
भांगली (0 ते 50)	कमी जोखीम	काळजी घेण्याची गरज नाही	काळजी घेण्याची गरज नाही

### Roles and Responsibilities of health department and medical college in HRI

Roles and responsibilities of health department, medical colleges & hospitals, health centres and link workers

Department	Season	Roles and responsibilities
<b>Health department</b>  <b>State Nodal Officer</b>	<b>During Pre-Heat Season</b> (Annually from January through March)	<ul style="list-style-type: none"> <li>• Create list of high risk areas (heat-wise) of districts/block/cities</li> <li>• Update surveillance protocols and programs, including to track daily heat-related data</li> <li>• Develop/revise and translate IEC in local language</li> <li>• Make a communication plan for dissemination of heat related alerts or education materials</li> <li>• Check inventories of medical supplies in health centers</li> <li>• Identify cooling centers and barriers to access cooling centers</li> <li>• Capacity building of health care personnel to detect and treat heat related illnesses</li> <li>• Community involvement for workers and trainers' education</li> <li>• Issue health advisory to healthcare personnel based on IMD seasonal prediction or warning</li> <li>• Reassess 'Occupational Health Standards' for various types of Occupation.</li> <li>• Ensure Inter-sectoral convergence and coordination for improving architecture, design, energy efficient cooling and heating facility, increase in plantation i.e. Climate Resilient Green Building Design.</li> </ul>
	<b>During Heat Season</b> (Annually from March through July)	<ul style="list-style-type: none"> <li>• Ensure real-time surveillance and monitoring system in case of extreme event.</li> <li>• Prepare rapid response team</li> <li>• Distribute "Dos and Don'ts" to community</li> <li>• Effectively send a "Don't Panic!"</li> </ul>

		<p>message to community</p> <ul style="list-style-type: none"> <li>• Ensure access to Medical Mobile Van in the Red Zone</li> <li>• Ensure additional medical vans available</li> <li>• Ensure strict implementation of legislative/regulatory actions as per Occupational Health Standards.</li> <li>• Coordination with meteorological department for analysing cases and death data with meteorological variables like maximum temperature and relative humidity</li> </ul>
	<p>During <b>Post-Heat Season</b> (Annually from July through September)</p>	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>
<b>Medical College and District Hospitals</b>	<p>During <b>Pre-Heat Season</b> (Annually from January through March)</p>	<ul style="list-style-type: none"> <li>• Adopt heat-focused examination materials</li> <li>• Get additional hospitals and ambulances ready</li> <li>• Update surveillance protocols and programs, including to track daily heat-related data</li> <li>• Establish more clinician education</li> <li>• Continue to train medical officers and paramedics</li> </ul>
	<p>During <b>Heat Season</b> (Annually from March through July)</p>	<ul style="list-style-type: none"> <li>• Adopt heat-illness related treatment and prevention protocols</li> <li>• Equip hospitals with additional materials</li> <li>• Deploy all medical staff to be on duty</li> <li>• Keep emergency ward ready</li> <li>• Keep stock of small reusable ice packs to apply to PULSE areas</li> <li>• Report heat stroke patients to DSU daily</li> <li>• Expedite recording of cause of death due to heat related illnesses</li> </ul>
	<p>During <b>Post-Heat Season</b> (Annually from July through September)</p>	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>

<b>For health centres and link workers</b>	During <b>Pre-Heat</b> Season (Annually from January through March)	<ul style="list-style-type: none"> <li>• Distribute pamphlet and other materials to community</li> <li>• Sensitize link workers and community leaders</li> <li>• Develop and execute school health program</li> <li>• Dissemination of materials in slum communities</li> <li>• Coordinate outreach efforts with other community groups, non-profits, and higher education</li> </ul>
	During <b>Heat</b> Season (Annually from March through July)	<ul style="list-style-type: none"> <li>• Recheck management stock</li> <li>• Modify worker hours to avoid heat of day</li> <li>• Visit at-risk populations for monitoring and prevention</li> <li>• Communicate information on tertiary care and 108 service</li> </ul>
	During <b>Post-Heat</b> Season (Annually from July through September)	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>

#### Other department's roles and responsibilities:

Department	Season	Roles and responsibilities
<b>Meteorological Department</b>	<b>Pre-Heat</b>	Issue weather forecasts on Short/Medium/Long range duration
	<b>Heat</b>	<ul style="list-style-type: none"> <li>• Issue Heat wave alerts</li> <li>• Coordination with health department for analysing cases and death data with meteorological variables like maximum temperature and relative humidity</li> </ul>
	<b>Post-Heat</b>	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>
<b>Department of</b>	<b>Pre-Heat</b>	Identify vulnerable places

<b>Drinking water &amp; Sanitation</b>	<b>Heat</b>	Provide drinking water points at identified places and worksites
	<b>Post-Heat</b>	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>
<b>Public Health &amp; Engineering Department</b>	<b>Pre-Heat</b>	To construct cool shelters/sheds at public places, bus stands etc
	<b>Heat</b>	To maintain shelters/sheds, bus stands
	<b>Post-Heat</b>	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>
<b>Municipalities</b>	<b>Pre-Heat</b>	Review the heat preparation measures.
	<b>Heat</b>	Ensure implementation of guidelines of heat action plan
	<b>Post-Heat</b>	Review the heat preparation measures and make a note of the lessons learnt for the next season
<b>Department of Education</b>	<b>Pre-Heat</b>	Train and Sensitise teachers and students towards health impact of extreme events and disseminate health ministry approved prevention and first-aid measures
	<b>Heat</b>	<ul style="list-style-type: none"> <li>• Rescheduling school timing during summer</li> <li>• During extreme events keep a check on outdoor activities</li> <li>• Close teaching institutes in case of issue of alert from Government</li> </ul>
	<b>Post-Heat</b>	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>

<b>Department of Labour &amp; employment</b>	<b>Pre-Heat</b>	<ul style="list-style-type: none"> <li>• Reassess 'Occupational Health Standards' for various types of Occupation.</li> <li>• Utilize maps of construction sites to identify more high-risk outdoor workers</li> <li>• Heat illness orientation for factory medical officers and general practitioners</li> <li>• Communicate directly about heat season with non-factory workers</li> </ul>
	<b>Heat</b>	<ul style="list-style-type: none"> <li>• Encourage employers to shift outdoor workers' schedules away from peak afternoon hours (1pm-5pm) during a heat alert or consider extended afternoon break or alternate working hours for workers.</li> <li>• Provide water at work sites</li> </ul>
	<b>Post-Heat</b>	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>
<b>Department of Power supply</b>	<b>Pre-Heat</b>	Maintenance of electrical lines
	<b>Heat</b>	Ensure uninterrupted supply of electricity
	<b>Post-Heat</b>	<ul style="list-style-type: none"> <li>• Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan Participate in annual evaluation of heat action plan</li> <li>• Review revised heat action plan</li> </ul>
<b>Department of Forest &amp; Climate change</b>	<b>Pre-Heat</b>	Develop/encourage projects to decrease the 'Urban Heat Island effect'
	<b>Heat</b>	Ensure implementation of guidelines of heat action plan
	<b>Post-Heat</b>	Review the heat preparation measures and make a note of the lessons learnt for the next season
